Aga Khan University Examination Board

Notes from E-Marking Centre on HSSC-II Commercial Geography Examination May 2019

Introduction

This document has been produced for the teachers and candidates of the Higher Secondary School Certificate (HSSC) Part II Commercial Geography. It contains comments on candidates' responses to the 2019 HSSC-II Examination paper II, indicating the quality of the responses and highlighting their relative strengths and weaknesses.

E-Marking Notes

This includes overall comments on candidates' performance on every question and *some* specific examples of candidates' responses which support the mentioned comments. Please note that the descriptive comments represent an overall perception of the better and weaker responses as gathered from the e-marking session. However, the candidates' responses shared in this document represent some specific example(s) of the mentioned comments.

Teachers and candidates should be aware that examiners may ask questions that address the Candidates Learning Outcomes (SLOs) in a manner that require candidates to respond by integrating knowledge, understanding and application skills they have developed during the course of study. Candidates are advised to read and comprehend each question carefully before writing the response to fulfil the demand of the question.

Candidates need to be aware that the marks allocated to the questions are related to the answer space provided on the examination paper as a guide to the length of the required response. A longer response will not in itself lead to higher marks. Candidates need to be familiar with the command words in the SLOs which contain terms commonly used in examination questions. However, candidates should also be aware that not all questions will start with or contain one of the command words. Words such as 'how', 'why' or 'what' may also be used.

General comments

Overall, the candidates performed well in questions related to the general aspects, applying their learning from Social Studies and Pakistan Studies. Most of the candidates have scored better marks on questions related to population and significance of transportation and communication in trade and commerce. However, candidates' responses to more technical aspects of Commercial Geography were particularly weak. This was mostly seen in questions related to agricultural products, places (i.e. seaports and dry ports) and role of transportation and communication in commercial trade. Candidates were also unable to comprehend scenarios or situations given in the questions and, hence, could not fulfil the requirement of the questions, particularly in extended response questions (ERQs). Questions referring to information and hypothetical data were also an area of attention which need to be improved as many of the candidates were unable to score full marks and have lost marks either in labelling or interpretations.

Note: Candidates responses reproduced in this report have not been corrected for grammar, spelling, format or factual information.

Detailed Comments:

Constructive Response Questions (CRQs)

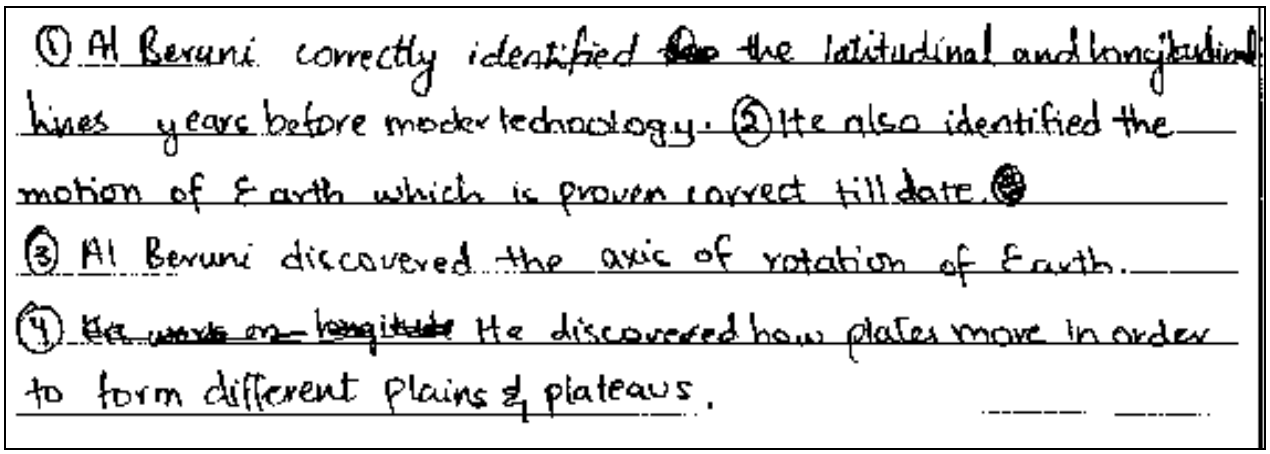

Question 1:

Mention any THREE major contributions of Abu Rehan Muhammad Al-Beruni in the field of geography.

Better responses mentioned the contributions of Abu Rehan Muhammad Al-Beruni in the field of geography. Such responses included contributions related to geography like calculating the diameter of the earth, methods of measuring distance, positioning a particular point on earth, positioning of sun and moon, various stars, rotation of earth on its own axis, formation of day and night and computing speed of light and speed of sound.

Moreover, cartography and projection of map, discovery of Indus valley and triangular method of distance were also included and considered correct these are not directly related to his geographic contributions.

Example:

① Al Beruni correctly identified the latitudinal and longitudinal lines years before modern technology. ② He also identified the motion of Earth which is proven correct till date. ③ Al Beruni discovered the axis of rotation of Earth. ④ He discovered how plates move in order to form different plains & plateaus.

Weaker responses comprehended the question in a general way rather than focusing on the contributions in the field of geography. Candidates wrote contributions in other fields, for instance, physics, geodesy and astronomy. Mostly weaker responses mentioned about seasonal changes, mineralogy, and invention of compass. These points were not relevant as the question was specifically about Al-Beruni's contributions in the field of geography.

Example

- Al-beruni is a muslim Scientist. Al-beruni Invent Compass.
- Al-beruni is the one who travel in muslim countries throughout the world.
- Al-beruni wrote a book al-Rihla in which he discribe about mineral & Resources.

Question 2:

Humans, as social beings, satisfy their socio-economic wants by performing activities which are classified as economic and non-economic. Few of their activities are mentioned in the given table.

Classify these as either economic OR non-economic human activities.

(**Note:** The first classification has been done for your assistance.)

S. No.	Activity	Classification of Human Activity
1	**Ali decided to join an NGO (non-governmental organisation) to fight against water pollution.**	**non-economic activity**
2	Salim joins a political party as a worker who promises to bring social change.	
3	Amin donates his one day salary for the construction of dam.	
4	Karim wins a car and cash prizes by participating in a quiz show on a television channel.	

In *Better responses* candidates were able to classify the activities into non-economic and economic respectively based on the monetary inflow and outflow i.e. 3 and 4 are economic activity because of monetary involvement while 2 non-econmic.

Example

S. No.	Activity	Classification of Human Activity
1	**Ali decided to join an NGO (non-governmental organisation) to fight against water pollution.**	**non-economic activity**
2	Salim joins a political party as a worker who promises to bring social change.	Non-economic activity
3	Amin donates his one day salary for the construction of dam.	Economic activity
4	Karim wins a car and cash prizes by participating in a quiz show on a television channel.	Economic activity

Weaker responses showed that candidates were unable to identify and relate their understanding of economic and non-economic activity to the given scenarios, thus have weak understanding of the concept. For example, some classified 3 as non-economic because it is a social cause.

Example:

S.No		Classification of Human Activity
1	**Ali decided to join an NGO (non-governmental organisation) to fight against water pollution.**	**non-economic activity**
2	Salim joins a political party as a worker who promises to bring social change.	Economic activity
3	Amin donates his one day salary for the construction of dam.	non-economic activity
4	Karim wins a car and cash prizes by participating in a quiz show on a television channel.	non-economi activity

Question 3:

Name any THREE fishing harbours of Pakistan.

Better responses correctly named the fishing harbours of Pakistan. These responses included Kemari fish harbour, Ibrahim Hydri Fish Harbour, Pasni Harbour, Jeevani Harbour, Ormara Harbour and Gawadar Fish Harbour.

Example:

1. Gawadar 4. ormara
2. Pasni
3. Jeevi (Jeevani), (Greenani)

Weaker responses were unable to distinguish between a sea port and fishing harbour and wrote the names of ports. The term port means a place having access to navigable water where ships load or unload for cargo or international trade meanwhile a fisheries or fishing harbour is a place where fish are reared for commercial purposes.

Furthermore, Karachi Fish Harbour (westwharf, Keemari) and Karachi Fisheries Harbour (Ibrahim hyderi, Korangi) were considered as one harbour though they are two different fishing harbours. Rest of the candidates gave irrelevant answers.

Example:

1. fish oil
2. fertilizers.
3. Nutrients (Vitamins)

Question 4:

Mention the feasible conditions for cultivating any ONE of the following crops (rice or tea).

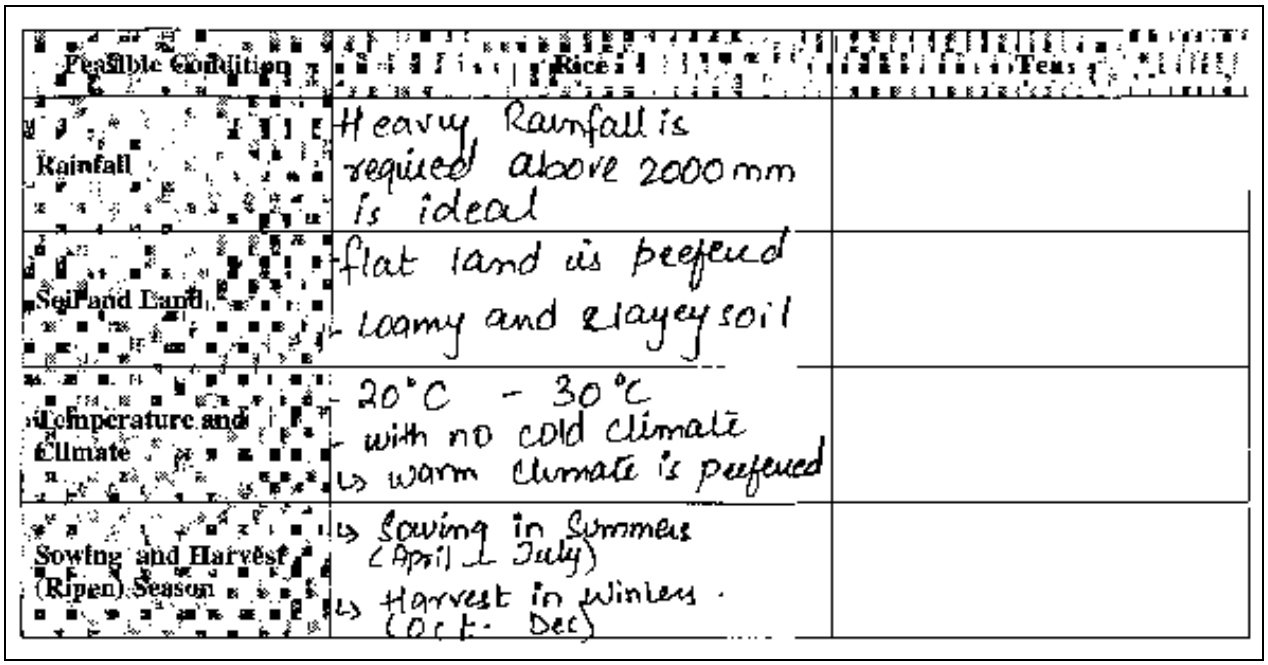

Feasible Condition	Rice	Tea
Rainfall		
Soil and Land		
Temperature and Climate		
Sowing and Harvest (Ripen) Season		

Better responses depicted that the range of rainfall and temperature were mentioned in different units which were converted (centimetre into millimetre and fahrenheit into celsius) and considered correct.

For the cultivation of rice crops most of candidates mention an average rainfall 10 to 30 inches, with temperature range between $15^{\circ C}$ to $22^{\circ C}$ its sown in late autumn and ripen in early summers and it thrives in well drained loam with plenty of humus.

For the cultivation of tea crops most of candidates mention an average rainfall 90 to 200 inches, with temperature range between 13°C to 24°C its plucking done in early summer and early winters as its grows around the year and it thrives in well drained deep friable barns or forest soil rich in humus with an elevation of 3000-7000 feet from the sea level.

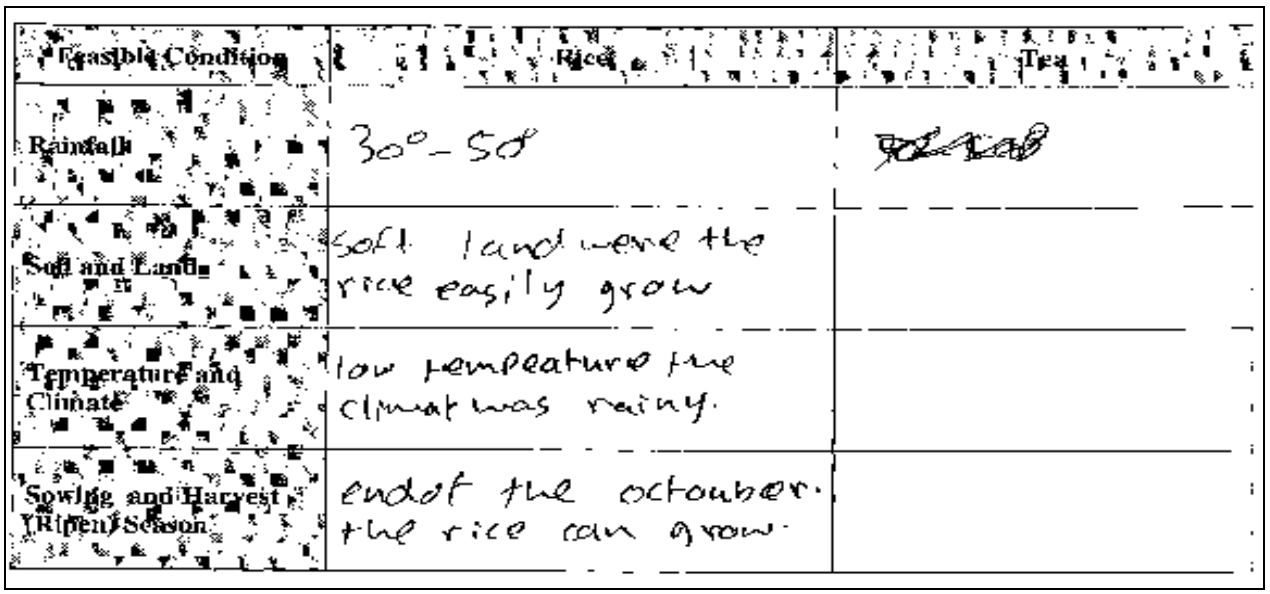

Example:

Feasible Condition	Rice	Tea
Rainfall	Heavy Rainfall is requied above 2000 mm is ideal	
Soil and Land	flat land is peefeed - Loamy and clayey soil	
Temperature and Climate	- 20°C - 30°C - with no cold climate ↳ warm climate is peefeed	
Sowing and Harvest (Ripen) Season	↳ Sowing in Summers (April & July) ↳ Harvest in Winters. (Oct. Dec)	

Most *Weaker responses* filled only one or two fields correctly. It was observed that in few weaker responses, the Soil and Land were given in general terms (i.e loamy or fertile clay) and temperature and climate were qualitatively expressed (i.e. high temperature or mild climate) rather than quantitative which was inappropriate. Sowing and Harvesting season were not stated separately (i.e. cultivated during summer season or in raining season).

Example:

Feasible Condition	Rice	Tea
Rainfall	30°-50°	
Soil and Land	soft land were the rice easily grow	
Temperature and Climate	low temperature the climat was rainy.	
Sowing and Harvest (Ripen) Season	endof the octouber. the rice can grow.	

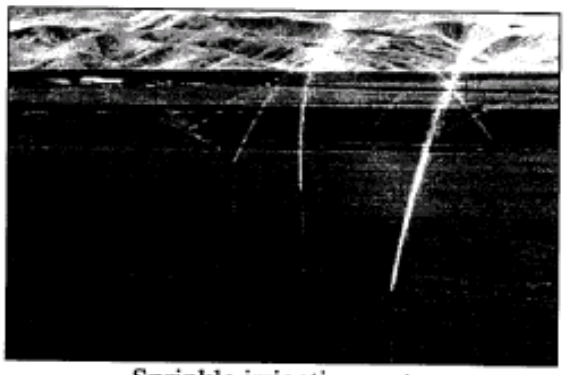

Question 5:

Describe any TWO features of the given irrigation systems. Attempt any TWO.

S. No.	Irrigation System	Features
1	 Surface irrigation system	1. 2.
2	 Sprinkle irrigation system	1. 2.
3	 Drip irrigation system	1. 2.

Better responses described the features of the given irrigation system which basically refers to artificial supplications of water. The question offered three methods from which candidates had to opt any two for writing their two features and it was well attempted by most of the candidates. Most of them mentioned features related to their coverage, cost effectiveness, control on water flow and water management.

Example:

2	 Sprinkle irrigation system	1. It is done on very large scale farming by the help of showers & pipes. 2. It is used to reduce the amount of water wastage.
3	 Drip irrigation system	1. It is used to minimize the waste of water by using small pipes and a tiny hole. Which is a very expensive method 2. water is given to the roots and is mostly used in orchards and vegetable farms.

Weaker responses showed candidates' failure to write two features. They generally overlapped or mixed the features of one with another. In few responses, the candidates wrote significance of irrigation system in general rather than specific i.e. the system more convenient and it is good for irrigation and provide sufficient water supply.

Example:

Sl No	Irrigation System	Features
1	 Surface irrigation system	1. The water flow of surface irrigation from tobewells. 2. The system is used to provide the water under the ground for roots directly.
2	 Sprinkle irrigation system	1. It used to give water far away for upper the ground. 2. It needs hydro power and water pumps to the flow of water -

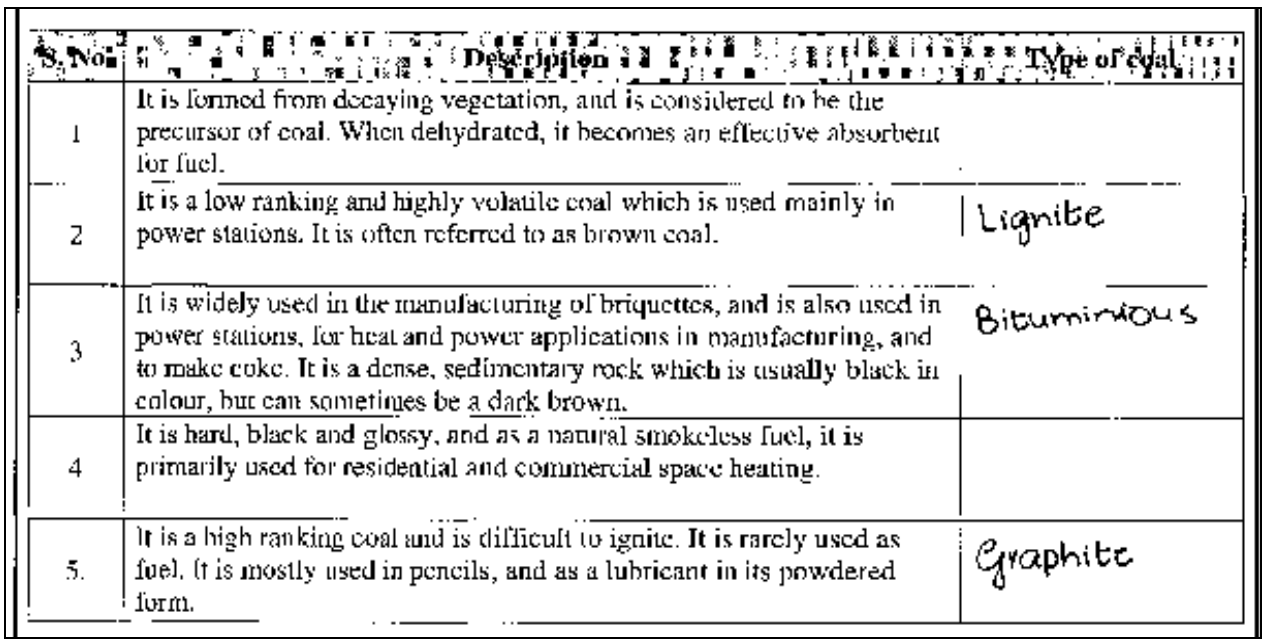

Question 6:

Identify any THREE types of coal based on the descriptions given in the table.

S. No.	Description	Type of coal
1	It is formed from decaying vegetation, and is considered to be the precursor of coal. When dehydrated, it becomes an effective absorbent for fuel.	
2	It is a low ranking and highly volatile coal which is used mainly in power stations. It is often referred to as brown coal.	
3	It is widely used in the manufacturing of briquettes, and is also used in power stations, for heat and power applications in manufacturing, and to make coke. It is a dense, sedimentary rock which is usually black in colour, but can sometimes be a dark brown.	
4	It is hard, black and glossy, and as a natural smokeless fuel, it is primarily used for residential and commercial space heating.	
5.	It is a high ranking coal and is difficult to ignite. It is rarely used as fuel. It is mostly used in pencils, and as a lubricant in its powdered form.	

Better responses identified the correct form of coal from the given description as respectively peat, lignite, bituminous, anthracite and graphite. These responses showed that candidates are familiar with the features of different types of coal.

Example

S. No	Description	Type of coal
1	It is formed from decaying vegetation, and is considered to be the precursor of coal. When dehydrated, it becomes an effective absorbent for fuel.	
2	It is a low ranking and highly volatile coal which is used mainly in power stations. It is often referred to as brown coal.	Lignite
3	It is widely used in the manufacturing of briquettes, and is also used in power stations, for heat and power applications in manufacturing, and to make coke. It is a dense, sedimentary rock which is usually black in colour, but can sometimes be a dark brown.	Bituminous
4	It is hard, black and glossy, and as a natural smokeless fuel, it is primarily used for residential and commercial space heating.	
5.	It is a high ranking coal and is difficult to ignite. It is rarely used as fuel. It is mostly used in pencils, and as a lubricant in its powdered form.	Graphite

Weaker responses were unable to identify the features. In few weaker responses, candidates could not understand the key terms and characteristics given to identify the types of coal i.e. their formed and colour with reference to their commercial use.

Generally, the answer to the last description was lead (Pb) instead of graphite, as description referred its use to manufacturing pencil. Graphite is a type of coal; Lead is not.

Example:

S. No.	Description	Type of coal
1	It is formed from decaying vegetation, and is considered to be the precursor of coal. When dehydrated, it becomes an effective absorbent for fuel.	lignetude
2	It is a low ranking and highly volatile coal which is used mainly in power stations. It is often referred to as brown coal.	Brown coal
3	It is widely used in the manufacturing of briquettes, and is also used in power stations, for heat and power applications in manufacturing, and to make coke. It is a dense, sedimentary rock which is usually black in colour, but can sometimes be a dark brown.	
4	It is hard, black and glossy, and as a natural smokeless fuel, it is primarily used for residential and commercial space heating.	Pure coal
5.	It is a high ranking coal and is difficult to ignite. It is rarely used as fuel. It is mostly used in pencils, and as a lubricant in its powdered form.	

Question 7:

Name any THREE railway stations of Pakistan that connect Pakistan with its neighbouring countries.

Better responses named the railway stations that connect Pakistan to its neighbouring countries i.e. Wahgah, koh-e-taftan and khokra par (ran of katch).

Example:

1. From lahore to india via wagah (lahore railway station)
2. From Quetta to Iran via Kohi-taftan (Quetta railway station)
3. From hyderabad to India via Ran of katch (hyderabad railway station)

Weaker responses were unable to name the railway stations. Mostly candidates wrote the names of cities next to the neighbouring borders rather than the railway stations i.e. Kashgar, Sialkot or Jalalabad.

1. gwa nanak railway station.
2. kashgar khasghar railway station
3. sialkot railway station

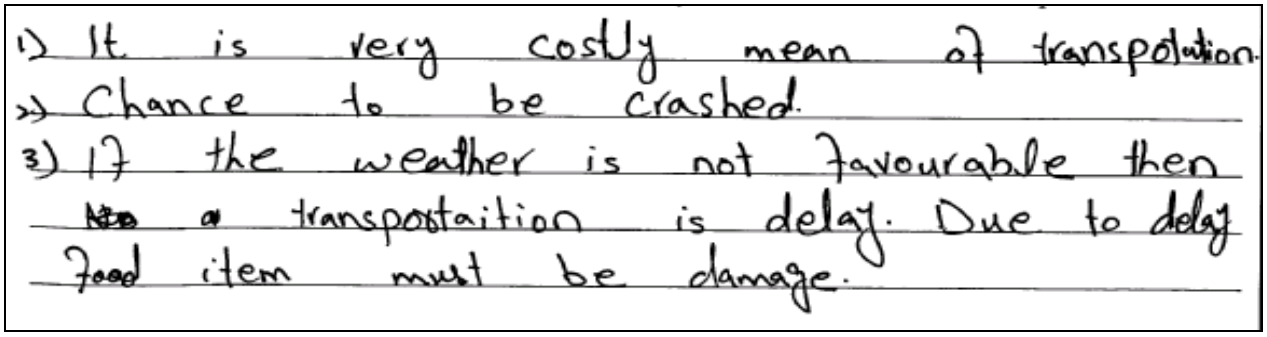

Question 8:

Air transport serves markets and supply chains that demand speed. Perishable goods such as foods, flowers and medicines are transported using shorter transit time.

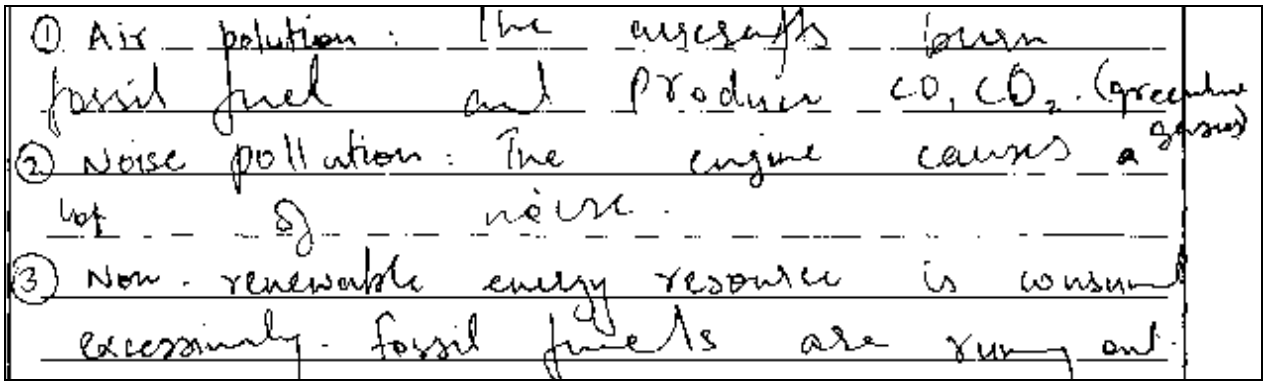

Apart from these merits, it also has few demerits. List any THREE demerits of air transportation.

Most of the better responses listed demerits which were related to trade and commerce; however, some of them also compared its economic cost and limitations which were also considered correct.

The mostly correct answer mentioned that it is an expensive medium, that has limitation of size and weight, legal boundaries, trade restrictions, heeds permission from various custom authorities for business purpose, fuel expense, minimum accessibility, cost of maintenance, door to door shipment, and buck consignments cannot be transported.

In *Weaker responses* candidate mostly wrote merits and demerits related to human means of transport. In some weaker responses, they wrote merits or rephrased the given merits in their own words rather than writing the demerits. Some of the weaker responses mentioned that air cargo spreads noise pollution and air pollution. It consumes energy resource on larger scale during the transportations of goods.

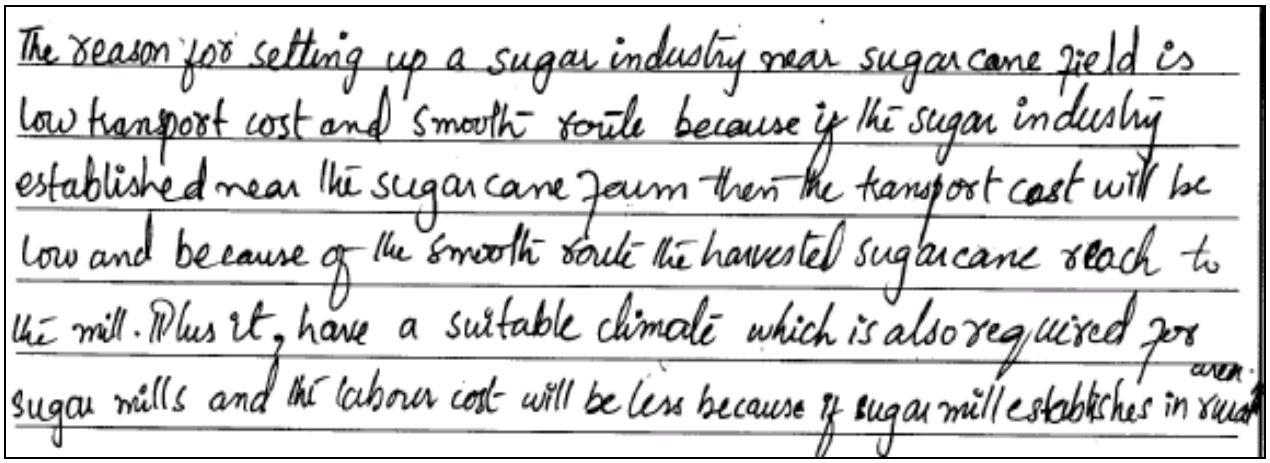

Question 9:

Explain any THREE economic and geographic reasons for setting up a sugar industry near the sugarcane field.

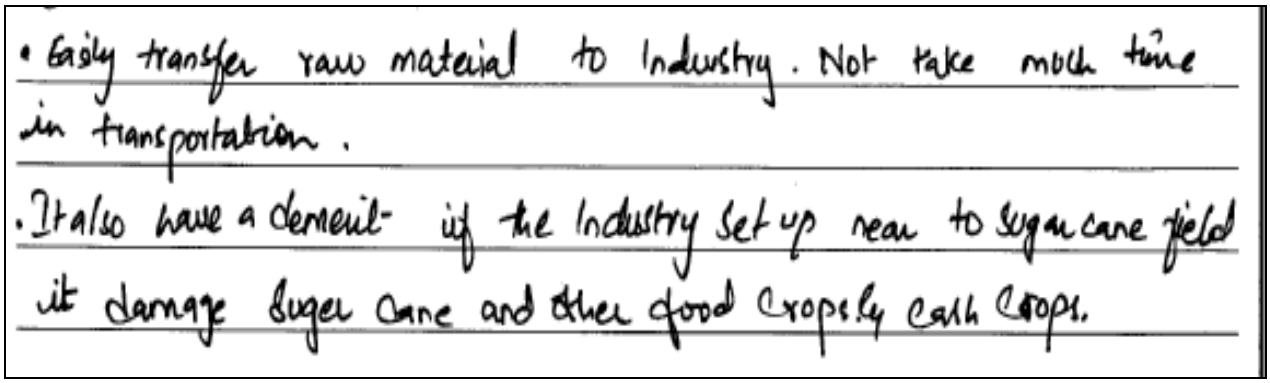

Better responses comprehended and explained the economic and geographic reasons for setting up a sugar industry near the sugarcane field. Most of the better responses mentioned that fresh ingredients of sugarcane are effective for the production of better quality product, employees are easily available for part time job at cheaper rate as well as cost of living of labour is low. Furthermore, few good responses highlighted that transportation expense remains low due to nearby location of sugar industry from the field.

Example:

The reason for setting up a sugar industry near sugarcane field is low transport cost and smooth route because if the sugar industry established near the sugarcane farm then the transport cost will be low and because of the smooth route the harvested sugarcane reach to the mill. Plus it, have a suitable climate which is also required for sugar mills and the labour cost will be less because if sugar mill establishes in rural area.

In *weaker responses*, instead of writing about location, some candidates emphasised on filtering and processing of sugar while others were unsure about the involvement of economic and geographical factors i.e. cost of production, cost of transportation, cost of getting good raw material timely for production.

Example:

• Easily transfer raw material to Industry. Not take much time in transportation.

• It also have a demerit- if the Industry set up near to sugarcane field it damage Sugar cane and other food crops. by cash crops.

Question 10:

There are two main agents which are responsible for the formation of soil: Wind and Water.

a. Describe the TWO major types of soil which are formed on the mentioned basis.

Alluvium soil_____

Aeolian soil _____

b. Describe any THREE types of soil found in Pakistan.

Indus basin soil _____

Bongar soil _____

Khaddar soil _____

Indus delta soil _____

This question has two parts. In part **a,** candidates had to describe the types of the soil on the basis of given agents and in part b, they had to describe the types of soils with reference to Pakistan.

In part **a,** most *better responses* described the correct type of soil (i.e. Alluvium and Aeolian) with reference to the given features.

In part **b**, better responses mentioned certain elements of soil found in Pakistan with reference to its deposition by rivers and its tributaries. They mentioned features such as content of calcium carbonate and organic matter with loamy or clayey qualities, soil's texture and agricultural productivity – its features related to cultivation and fertility.

Example:

Alluvium soil Alluvium soil are the soil which gathered through floods or heavy rain. They are the most fertile soil and organic matter as well

Aeolian soil Aeolian soil are formed through the pressure of wind. It is not as fertile as alluvial.

b. Describe any THREE types of soil found in Pakistan. (3 Marks)

Indus basin soil Indus Basin have loam and sandy in Upper Indus and loamy and clayey in lower Indus basin. effective for agriculture

Bongar soil Bongar Dil (old soil) they are rich in organic matter and can be found in indus plain

Khaddar soil Khaddar soil are not very much fertile, they have least amount of organic matter.

Indus delta soil

In *weaker responses* candidates were not aware about the agents and the soil formation process; therefore, they could not describe the given soil types. Mostly they wrote general features related i.e. the soils is dry, it have minerals, rich in moisture, absorb water, or fertile in nature. Mostly answer were irrelevant as shown in the given example.

Example:

a. There are two main agents who are responsible for the formation of soil: Wind and Water.

Describe the TWO major types of soil which are formed on the mentioned basis. (2 Marks)

Alluvium soil Soil which is formed by Wind known as alluvium Soil

Aeolian soil Soil which is formed by water known as aeloian Soil

b. Describe any THREE types of soil found in Pakistan. (3 Marks)

Indus basin soil Soil which is made up of water this is known as indus basin Soil which found near Sea Area's.

Bongar soil

Khaddar soil Soil which is Very dry mostly found in dry, hot weather known as khaddar Soil

Indus delta soil

Extended Response Question (ERQ)

This question had two parts with choices. Part **a,** was related to share of fishing industry in Pakistan and suggestion to improve the current share in GDP whereas, part **b**, was about effects of vegetation on the economy. Most of the candidates opted for part **b** and they performed fairly well in this part.

Question 11a:

During the first three quarters of 2017, fish exports of Pakistan showed an increase by 12.2 % in quantity and 15.09% in value as compared to last year. Despite of this, it is contributing only 0.41% of the country's GDP.

(Source: https://pakobserver.net/fisheries-exports-contribute-276-269m-national-kitty/ Pakistan Observer, Economy Watch, July 31, 2017)

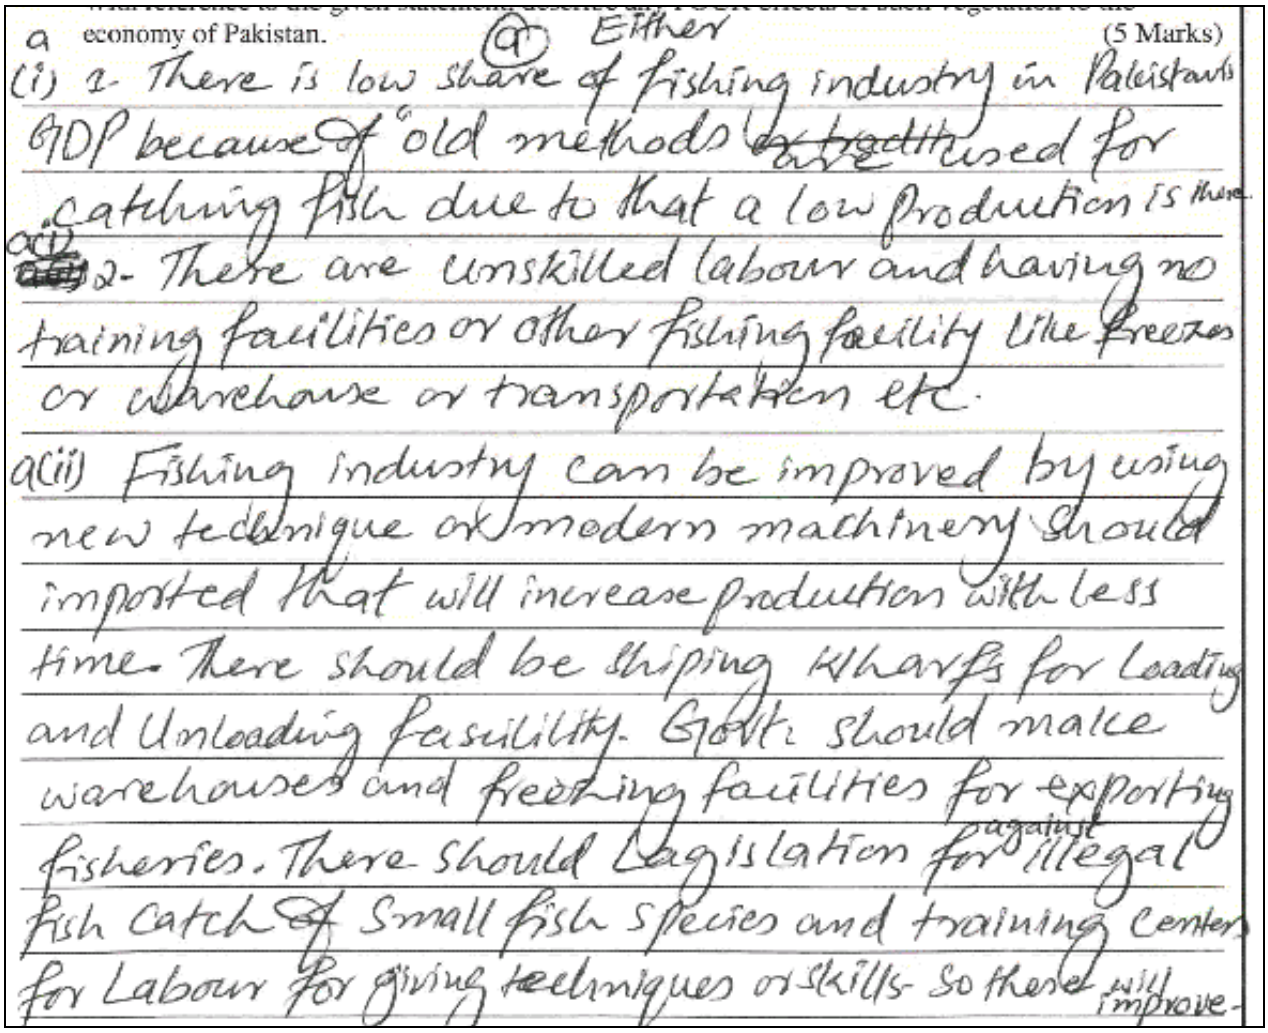

i. Write any TWO reasons for such a low share of fishing industry in Pakistan.

ii. Suggest any THREE ways for improving the portion of fishing industry in Pakistan's GDP (gross domestic product).

In *better responses* to part (i) candidates highlighted reasons for the given economic information such as lack of awareness about better fishing techniques, lack of technology and expertise, and low productivity of concerned industry. Moreover, improper infrastructure and storage facilities, water pollution, low interest of government, weather forecasting, old techniques, cutting of mangrove trees were mentioned in most of the responses. Furthermore, in response to part **ii,** candidates reflected the suggestions for improving the portion of fishing industry such as, developing proper economic trade zones on the coastal line and river banks which leads to more catch, providing weather forecasting facilities, improvement of cold storage facilities, development of policies and that the government should provide interest free loans for increasing fishing and revenues.

In this question, candidates were allotted one mark for each reason, one mark for each suggestion and an additional mark was awarded for linking the answer to a Pakistan scenario i.e. how this suggestion will impact the contribution of fishing industry to Pakistan's GDP.

Example:

a economy of Pakistan. (a) Either (5 Marks)

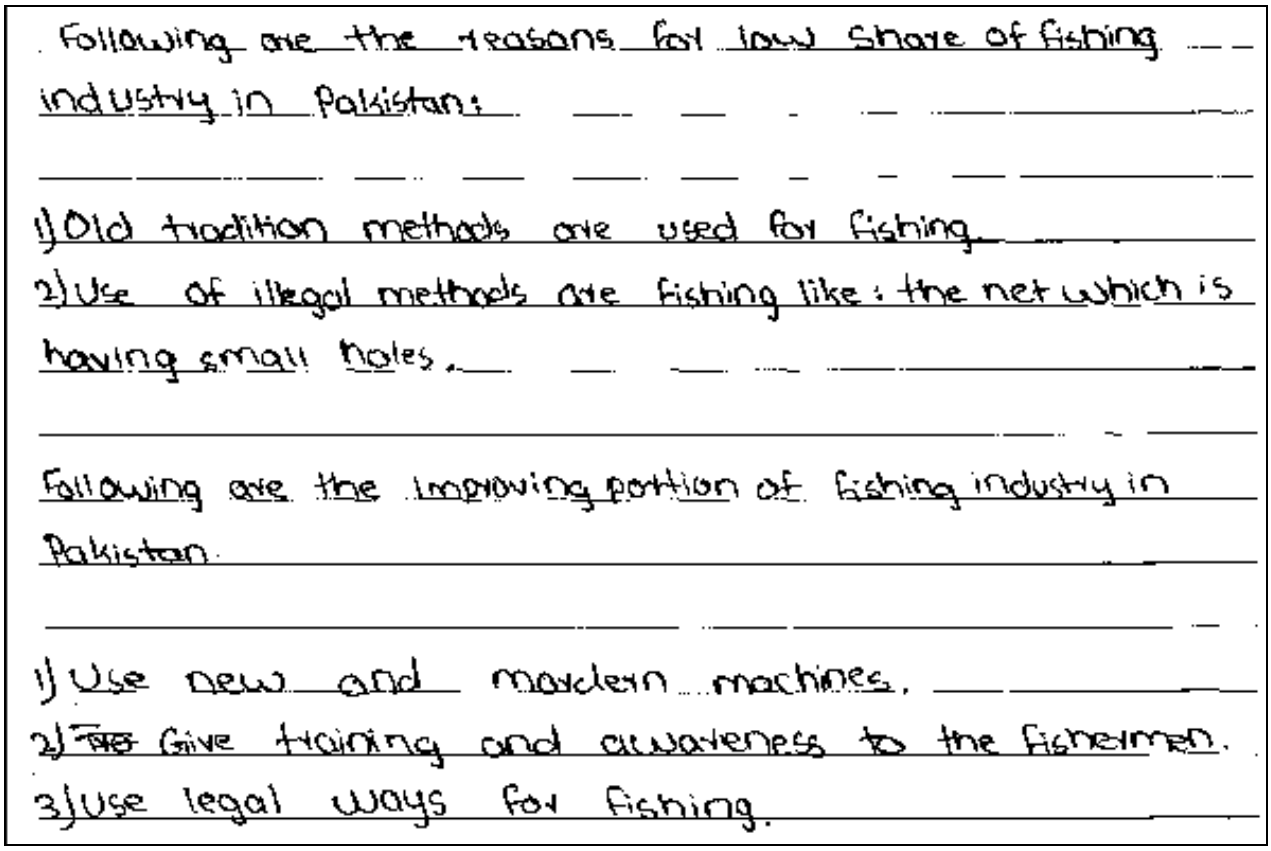

(i) 1- There is low share of fishing industry in Pakistan's GDP because of old methods ~~of tradition~~ are used for catching fish due to that a low production is there.

2- There are unskilled labour and having no training facilities or other fishing facility like freezers or warehouse or transportation etc.

a(ii) Fishing industry can be improved by using new technique or modern machinery should imported that will increase production with less time. There should be shiping Wharfs for loading and Unloading facilility. Govt. should make warehouses and freezing facilities for exporting fisheries. There should Legislation against for illegal fish catch of small fish species and training center for Labour for giving techniques or skills. So there will improve.

In *weaker responses*, most of the candidates missed the concerned aspect and they were unable to connect the response with Pakistan's GDP; Moreover, candidate got confused and merged part (i) and (ii), i.e. reasons with suggestions and produced an ambiguous answer. In responses candidates mentioned that the traditional method is in use but in suggestions not mentioned how this problem can be address or illegal fishing as a problem but nothing how it would be resolve. Candidates were unable to connect their suggestion to the impact it will bring in contribution of fishing industry in Pakistan's GDP.

Example:

Following are the reasons for low share of fishing industry in Pakistan:

1) Old tradition methods are used for fishing.
2) Use of illegal methods are fishing like: the net which is having small holes.

Following are the improving portion of fishing industry in Pakistan.

1) Use new and modern machines.
2) ~~Take~~ Give training and awareness to the fishermen.
3) Use legal ways for fishing.

Question 11b:

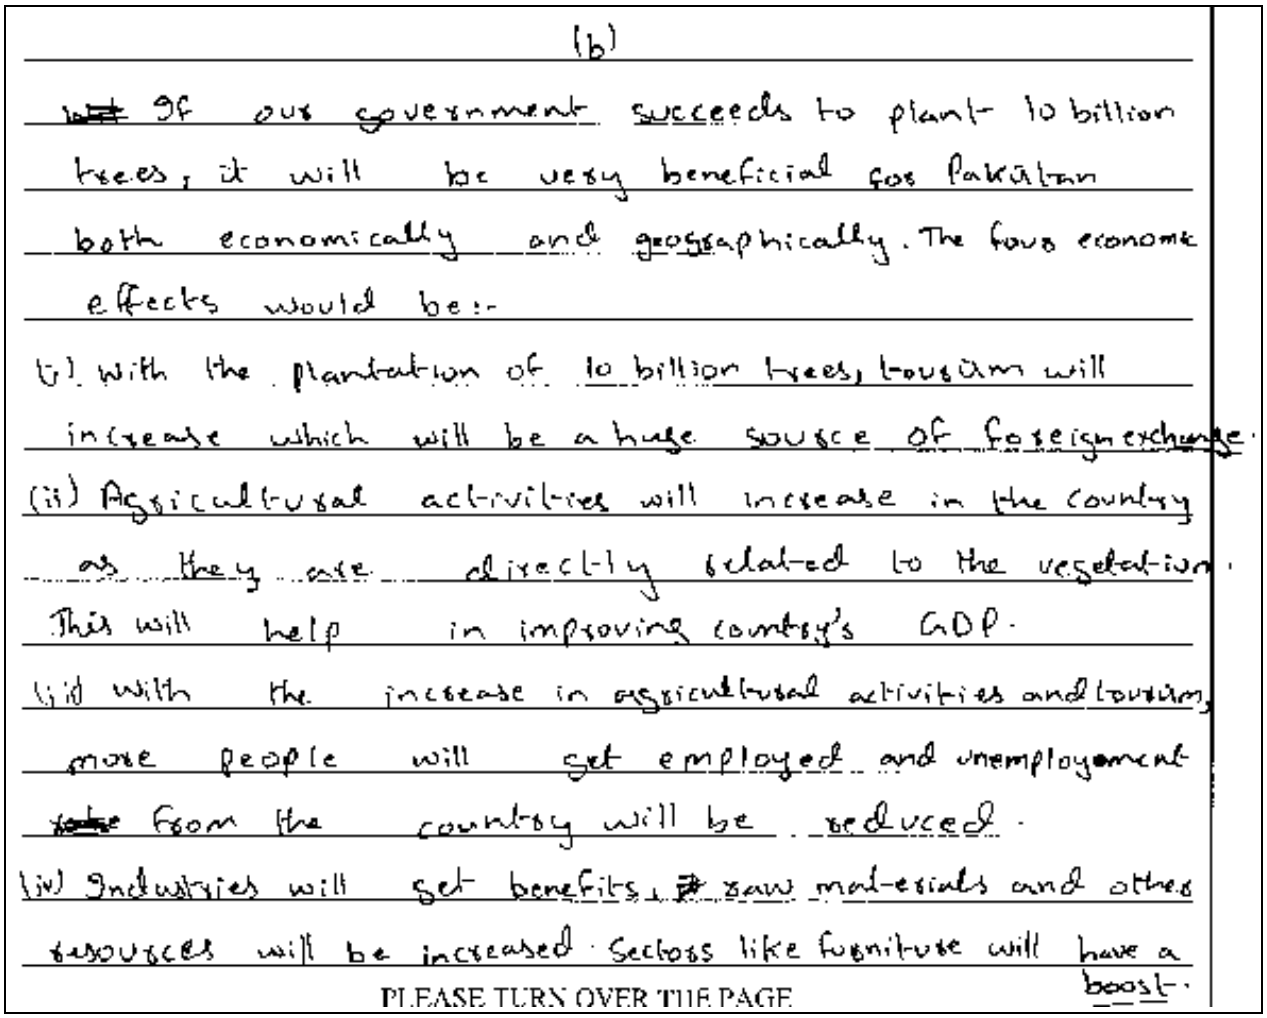

Pakistan's current federal government plans to launch its own Green Pakistan programme. It aims to plant 10 billion trees in five years across the country.

With reference to the given statement, describe any FOUR effects of such vegetation on the economy of Pakistan.

In *better responses*, candidates described that vegetation binds the soil and prevents flooding, decreases soil erosion which improves agriculture and forest wood is used in furniture industry and wooden craft; this will boost our economy. Furthermore some of them mentioned that fruits and herbs are used in several industries for manufacturing juices, medicines and products. In some *better responses*, candidates also linked the effects to the economy in terms of increase in employment, GDP and revenues.

In this question, candidates were allotted one mark for describing each effect and an additional mark was awarded for linking the answer to the Pakistani scenario.

Example:

(b)

If our government succeeds to plant 10 billion trees, it will be very beneficial for Pakistan both economically and geographically. The four economic effects would be:-

(i) With the plantation of 10 billion trees, tourism will increase which will be a huge source of foreign exchange.

(ii) Agricultural activities will increase in the country as they are directly related to the vegetation. This will help in improving country's GDP.

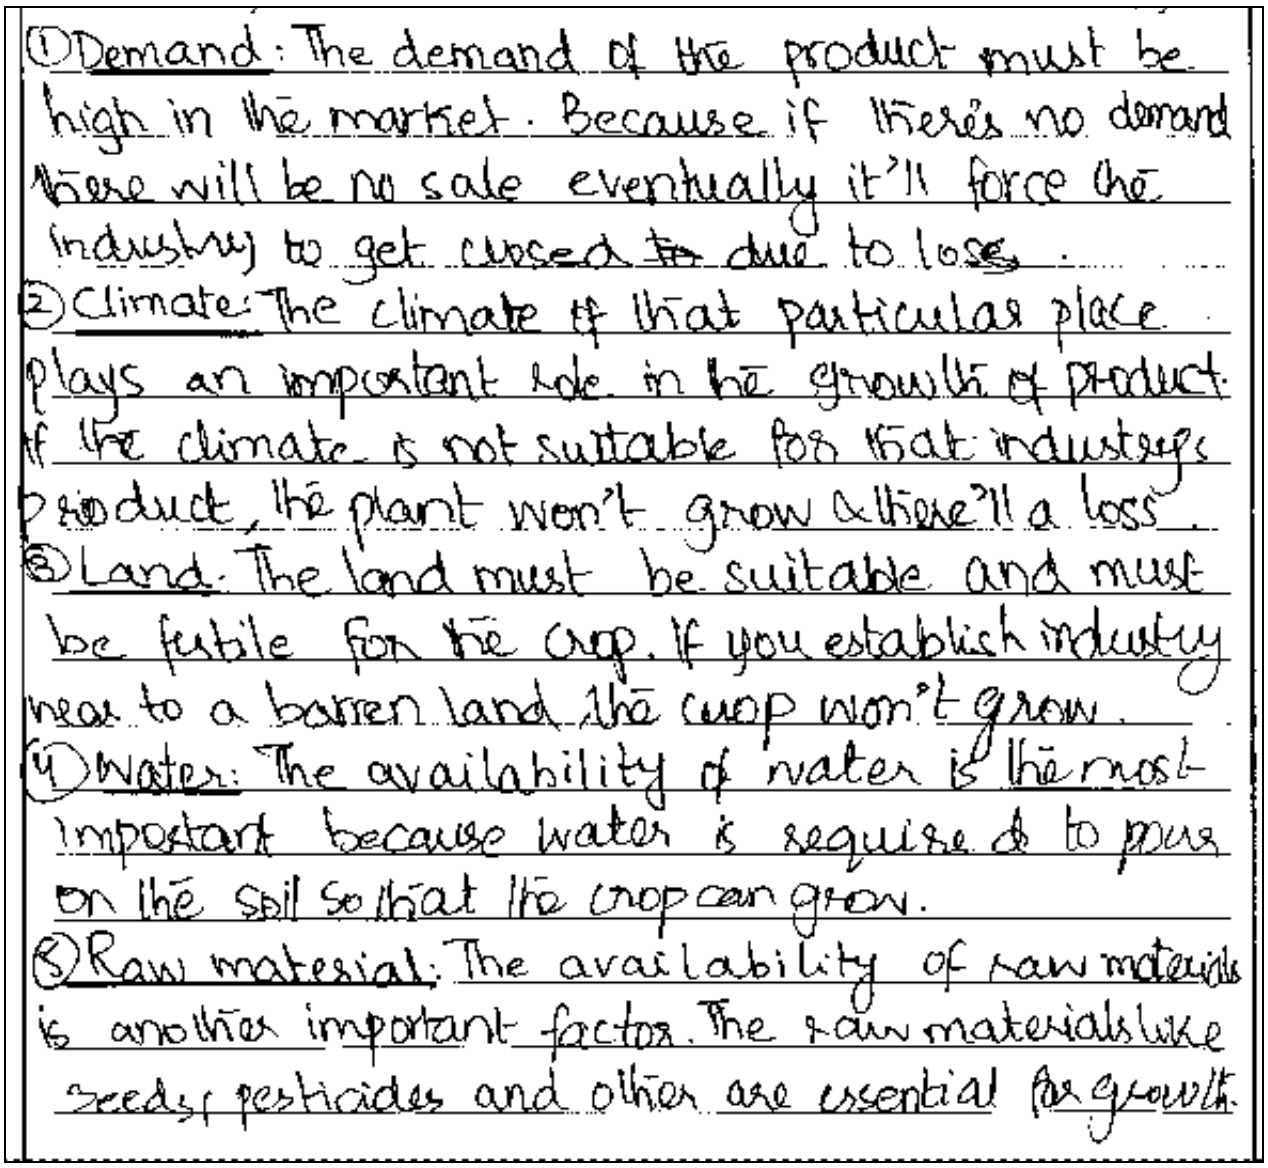

(iii) With the increase in agricultural activities and tourism, more people will get employed and unemployement from the country will be reduced.

(iv) Industries will get benefits, raw materials and other resources will be increased. Sectors like furniture will have a boost.

PLEASE TURN OVER THE PAGE

In *weaker responses*, candidates were mostly unable to comprehend the question. In some weak responses, candidates wrote economic effects of vegetation in general and did not highlighted the concerned advantages of natural vegetation with reference to the economy of Pakistan which was required. For example they wrote that increase in vegetation will lead to increase revenue generation but did not able to explain how.

Example:

① Demand: The demand of the product must be high in the market. Because if there's no demand there will be no sale eventually it'll force the industry to get closed due to loses.

② Climate: The climate of that particular place plays an important role in the growth of product. If the climate is not suitable for that industries product, the plant won't grow & there'll a loss.

③ Land: The land must be suitable and must be fertile for the crop. If you establish industry near to a barren land the crop won't grow.

④ Water: The availability of water is the most important because water is requires to pour on the soil so that the crop can grow.

⑤ Raw material: The availability of raw materials is another important factor. The raw materials like seeds, pesticides and other are essential for growth.

This question had two parts with choices. Part **a,** was related to merits and demerits of transportation modes and its impact on trade and economic activities whereas, part **b**, was about factors need to be considered before establishing an industry.

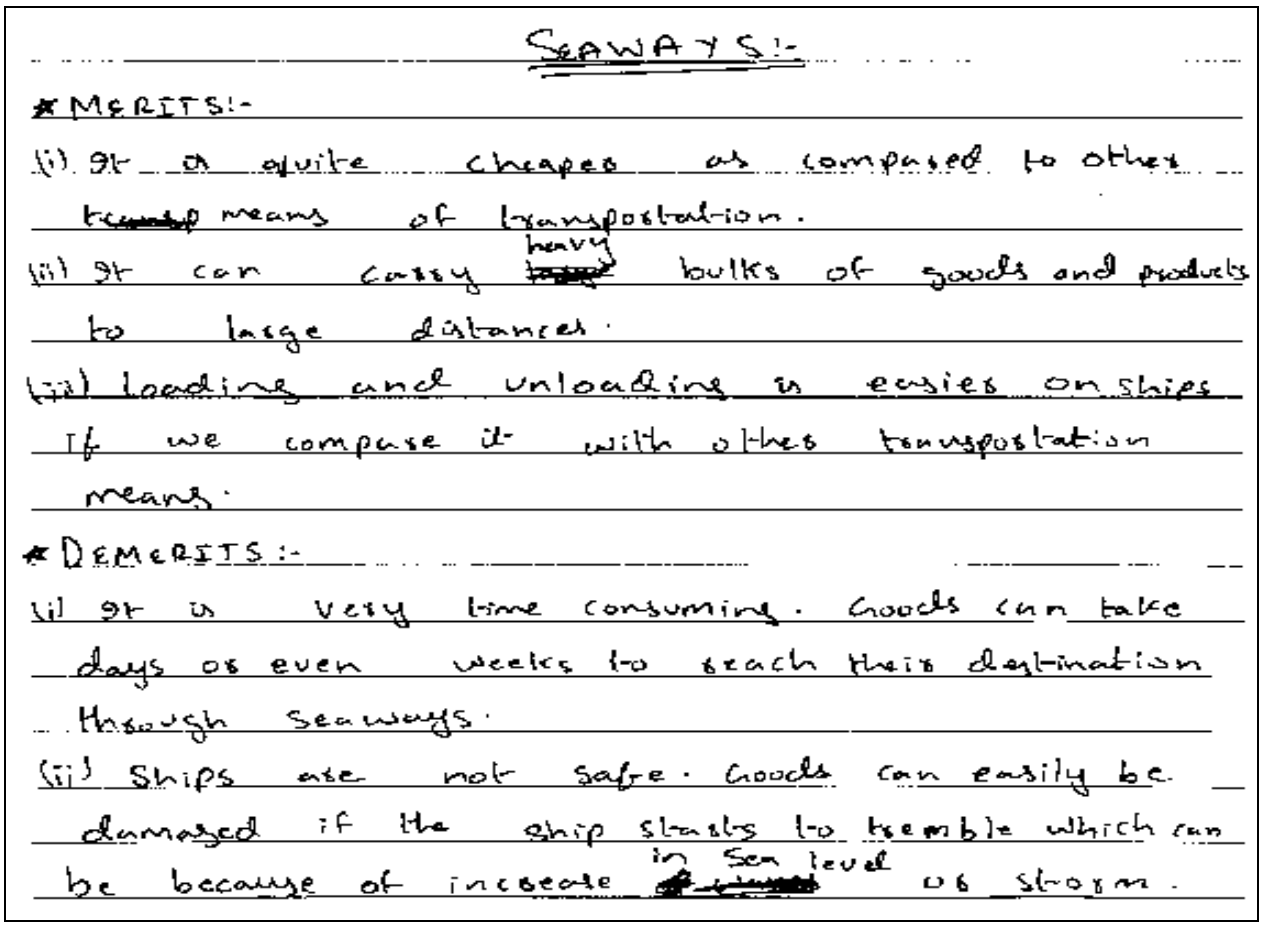

Question 12a:

Modes of transportation play a vital role in the world trade and economic activities. With reference to this statement, write THREE merits and TWO demerits of any ONE of the following:

- Railways
- Roadways
- Seaways

In *better responses,* candidates wrote about merits and demerits of modes of transportation with reference to the trade and economic activities, i.e. suitability for loading and unloading goods, climatic conditions, capital investment and fuel consumption and delivery time. Most candidates obtained good marks in this question.

Example:

SEAWAYS:-

* MERITS:-

(i) It is quite cheaper as compared to other means of transportation.

(ii) It can carry heavy bulks of goods and products to large distances.

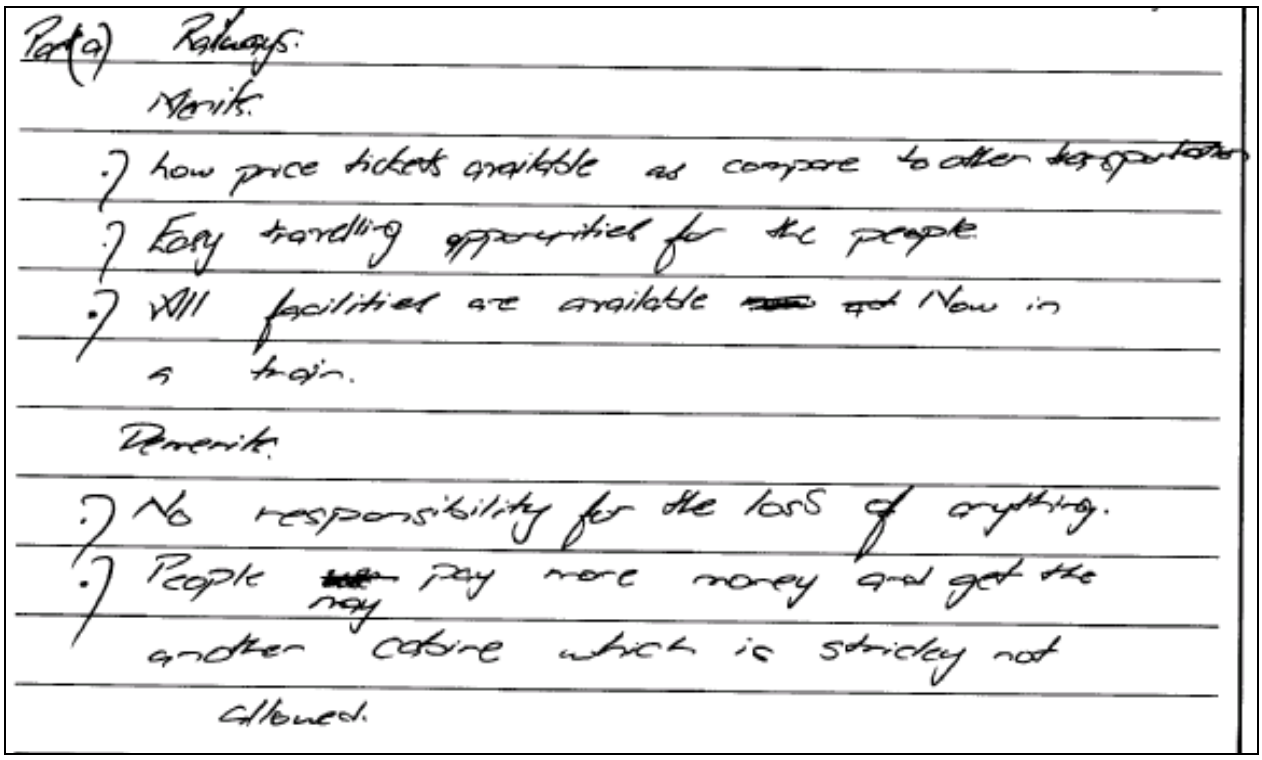

(iii) loading and unloading is easier on ships if we compare it with other transportation means.

* DEMERITS:-

(i) It is very time consuming. Goods can take days or even weeks to reach their destination through seaways.

(ii) Ships are not safe. Goods can easily be damaged if the ship starts to tremble which can be because of increase in sea level or storm.

In *weaker responses,* candidates wrote general things regarding the modes of transportation and their impact on economic activity. Moreover, some candidates were not able to give the required number of merits and demerits.

Part(a) Railways:

Merits

- How price tickets available as compare to other transportation
- Easy travelling opportunities for the people
- Will facilities are available not Now in a train.

Demerits

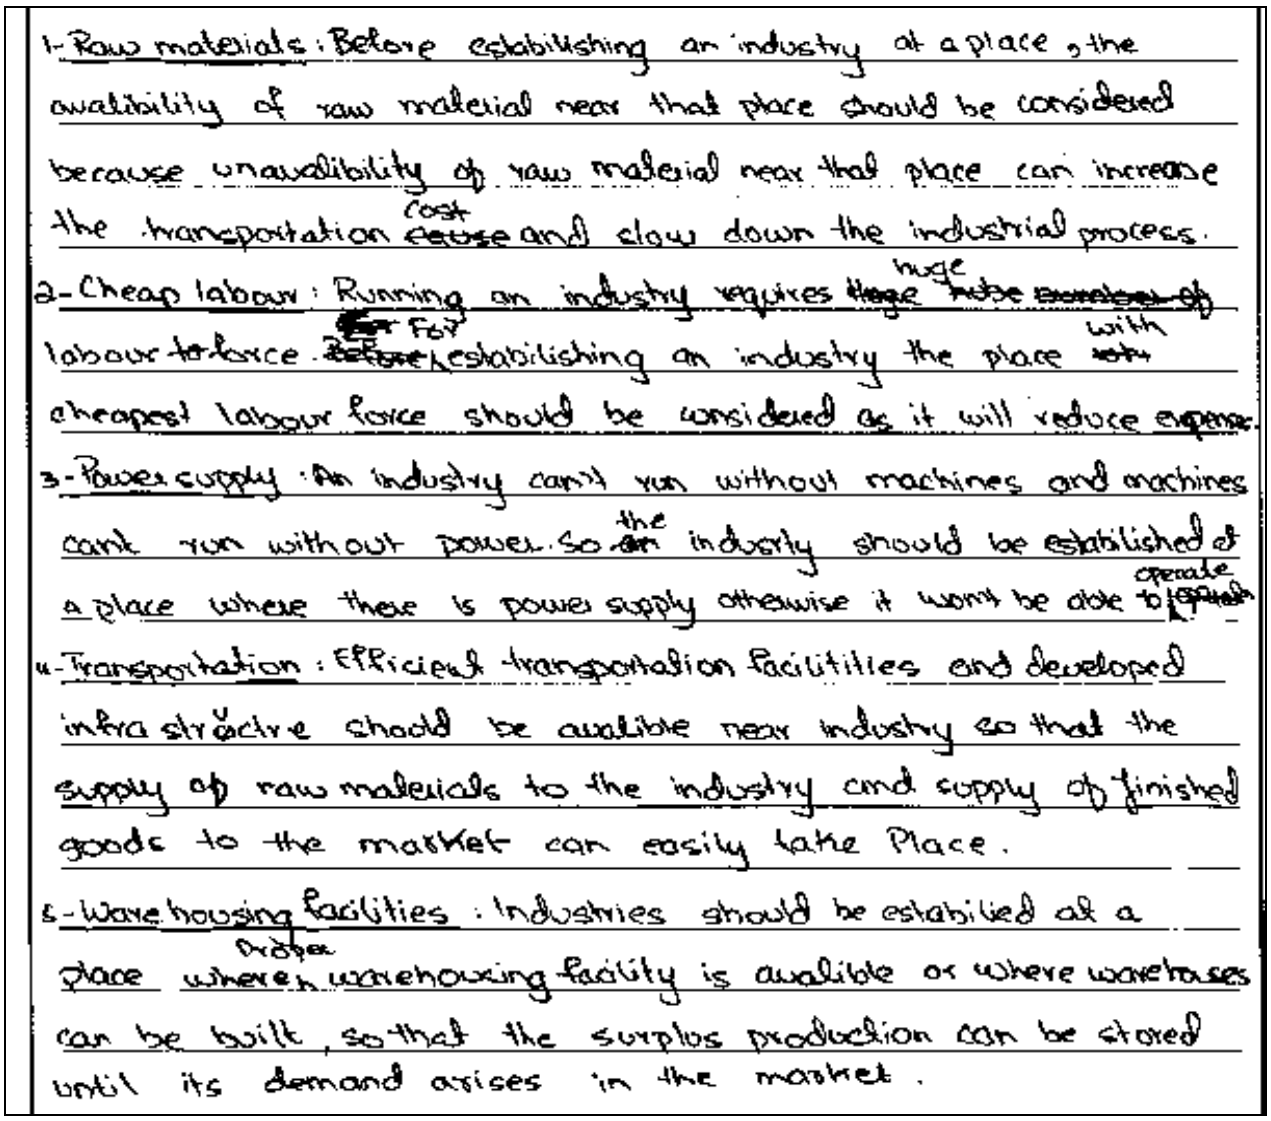

- No responsibility for the loss of anything.
- People may pay more money and get the another cabine which is strictly not allowed.

Question 12b:

Describe any FIVE factors that need to be considered before the establishment of an industry.

In *better responses*, candidates identified and described the factors to be considered for establishing an industry such as land, labour, capital and entrepreneurial expenditures.

Example:

1- Raw materials : Before establishing an industry at a place, the availability of raw material near that place should be considered because unavailability of raw material near that place can increase the transportation cost and slow down the industrial process.

2- Cheap labour : Running an industry requires huge labour force. For establishing an industry the place with cheapest labour force should be considered as it will reduce expense.

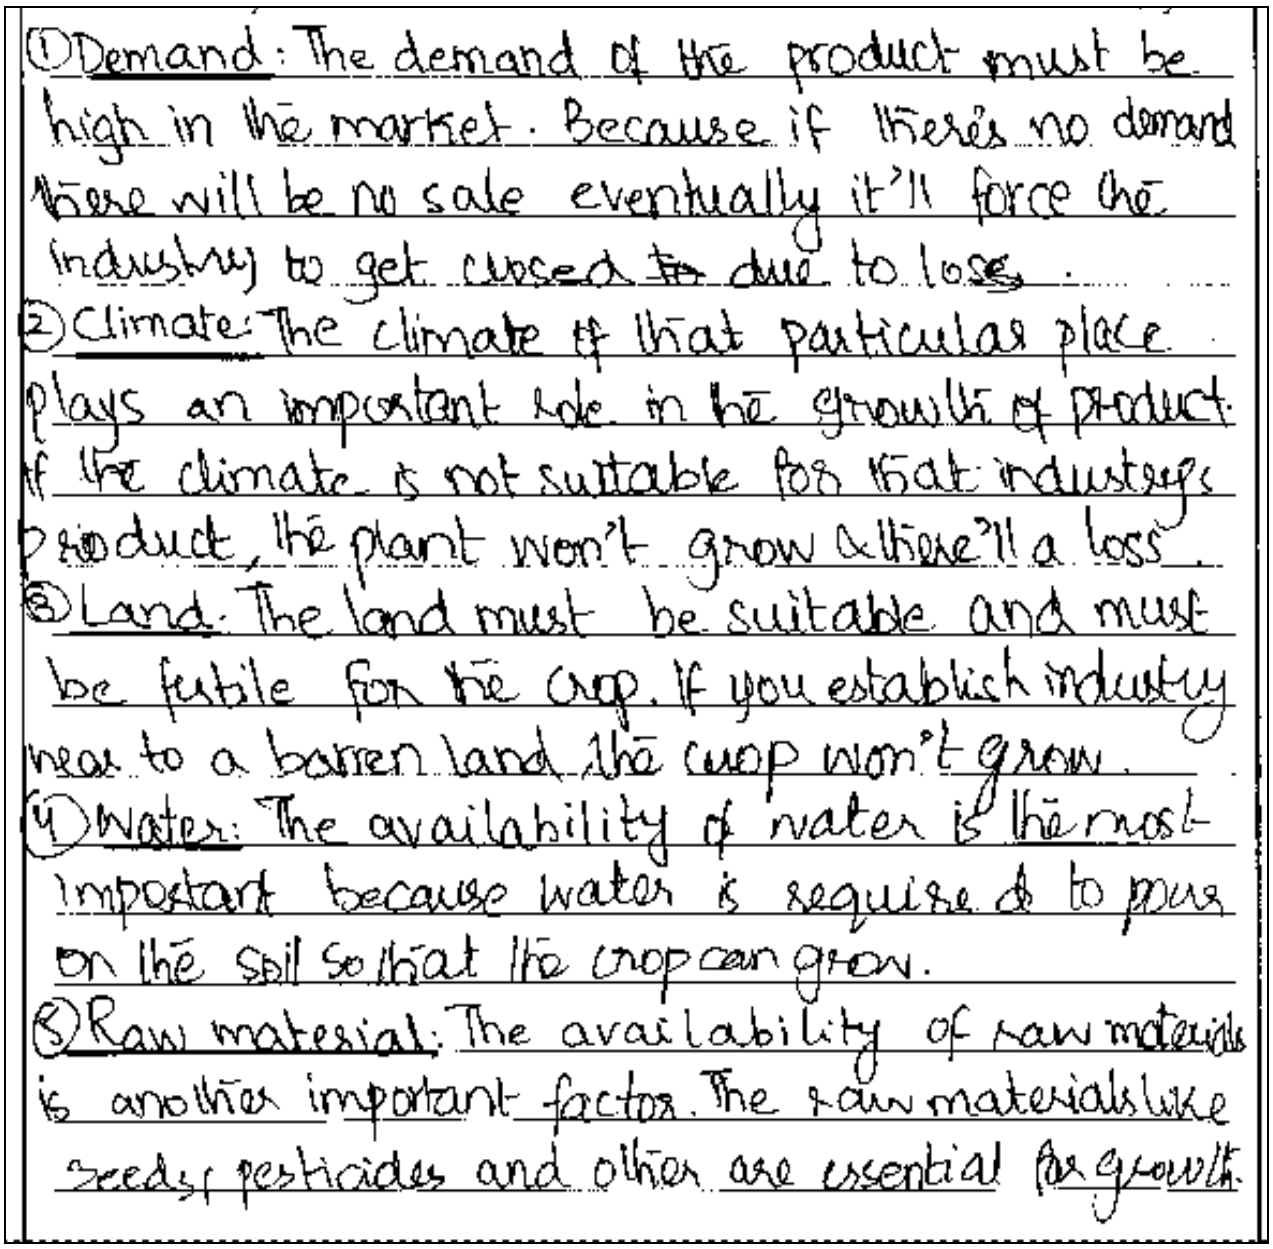

3- Power supply : An industry can't run without machines and machines can't run without power. So the industry should be established at a place where there is power supply otherwise it won't be able to operate.

4- Transportation : Efficient transportation facilities and developed infra structure should be availble near industry so that the supply of raw materials to the industry and supply of finished goods to the market can easily take Place.

5- Warehousing facilities : Industries should be established at a place where warehousing facility is availble or where warehouses can be built, so that the surplus production can be stored until its demand arises in the market.

In *weaker responses*, candidates were unable to comprehend the question. Thus they mostly wrote irrelevant points which included availability of credit financing or political policies.

Example:

① Demand: The demand of the product must be high in the market. Because if there's no demand there will be no sale eventually it'll force the industry to get closed due to loss.

② Climate: The climate of that particular place plays an important role in the growth of product. If the climate is not suitable for that industry's product, the plant won't grow & there'll a loss.

③ Land: The land must be suitable and must be fertile for the crop. If you establish industry near to a barren land the crop won't grow.

④ Water: The availability of water is the most important because water is required to pour on the soil so that the crop can grow.

⑤ Raw material: The availability of raw materials is another important factor. The raw materials like seeds, pesticides and other are essential for growth.

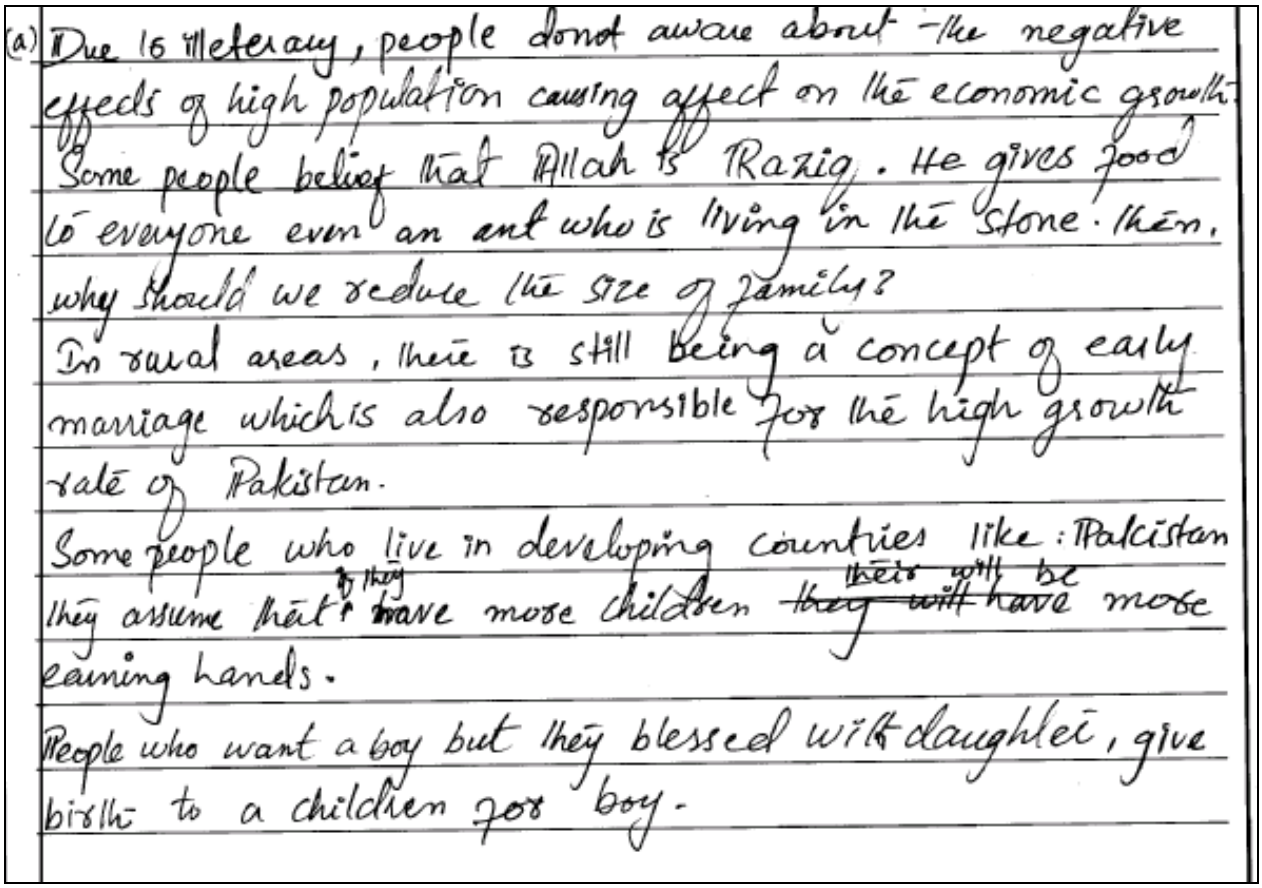

This question had two parts with choices. Part **a,** was related to factors responsible for high growth rate of population whereas, part **b**, was about the causes of increase in population globally.

Question 13a:

Describe any FIVE factors responsible for the high growth rate of population in Pakistan.

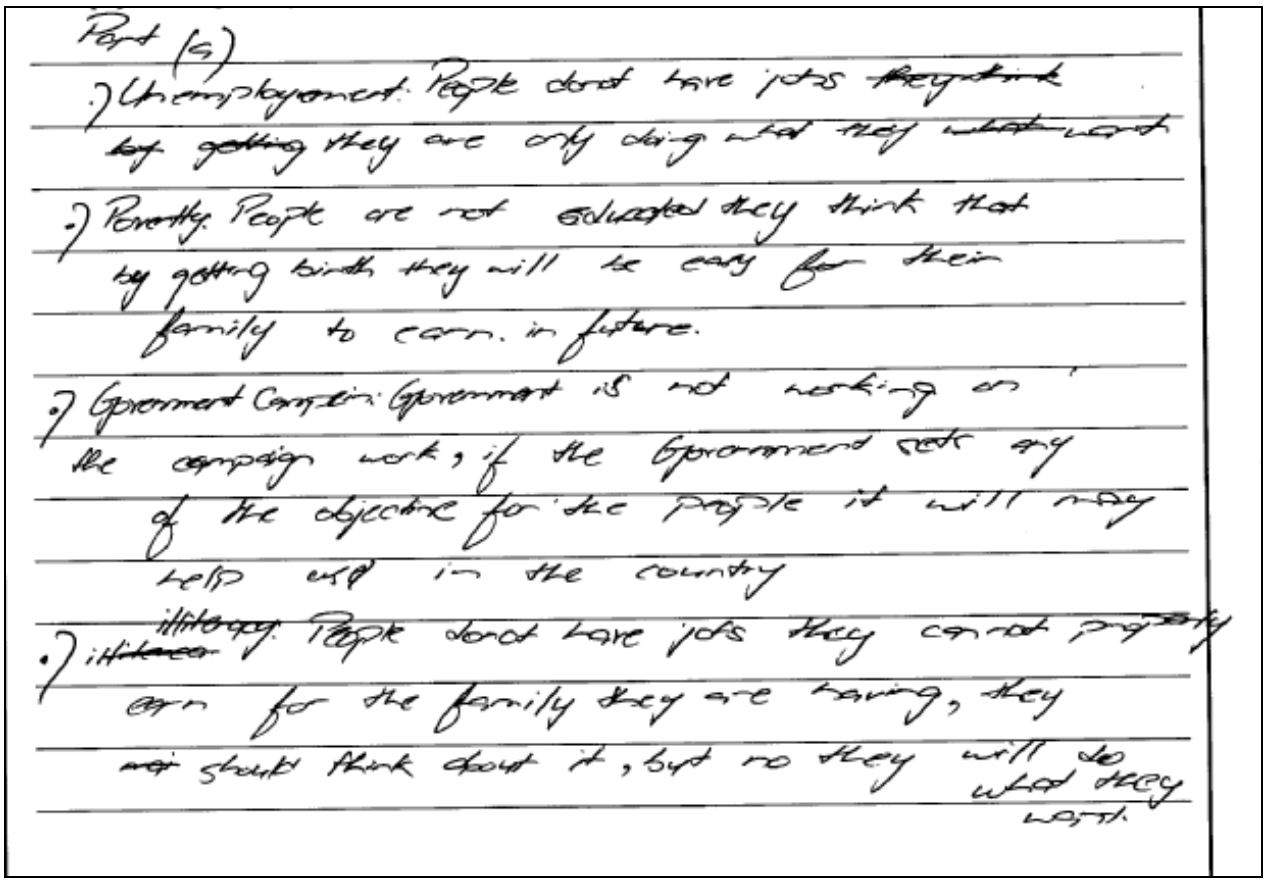

In *better responses*, candidates described the factors responsible for high growth rate of population in Pakistan. Some better responses also mentioned the economic factors and identified these factors with macroeconomic lens i.e. lack of literacy, lack of awareness in population control, lack of knowledge of population pressure.

Example:

(a) Due to illeteracy, people donot aware about the negative effects of high population causing affect on the economic growth.
Some people belief that Allah is Razig. He gives food to everyone even an ant who is living in the stone. then, why should we reduce the size of family?
In rural areas, there is still being a concept of early marriage which is also responsible for the high growth rate of Pakistan.
Some people who live in developing countries like: Pakistan they assume that ~~they~~ if they have more children ~~they will have~~ their will be more earning hands.
People who want a boy but they blessed with daughter, give birth to a children for boy.

In *weaker responses,* candidates were unable to comprehend the question. Mostly candidates wrote social factors rather than writing from the economic perspective i.e. early marriages, customs of having more children, religious reasons etc.

Example:

Part (a)
1) Unemployement: People dont have jobs ~~they think~~ ~~by~~ getting they are only doing what they want
2) Poverty: People are not educated they think that by getting birth they will be easy for their family to earn. in future.
3) Government Corruption: Government is not working on the campaign work, if the Government get any of the objective for the people it will may help us in the country
4) ~~illiteracy~~ illiteracy: People dont have jobs they cannot properly earn for the family they are having, they ~~not~~ should think about it, but no they will do what they want.

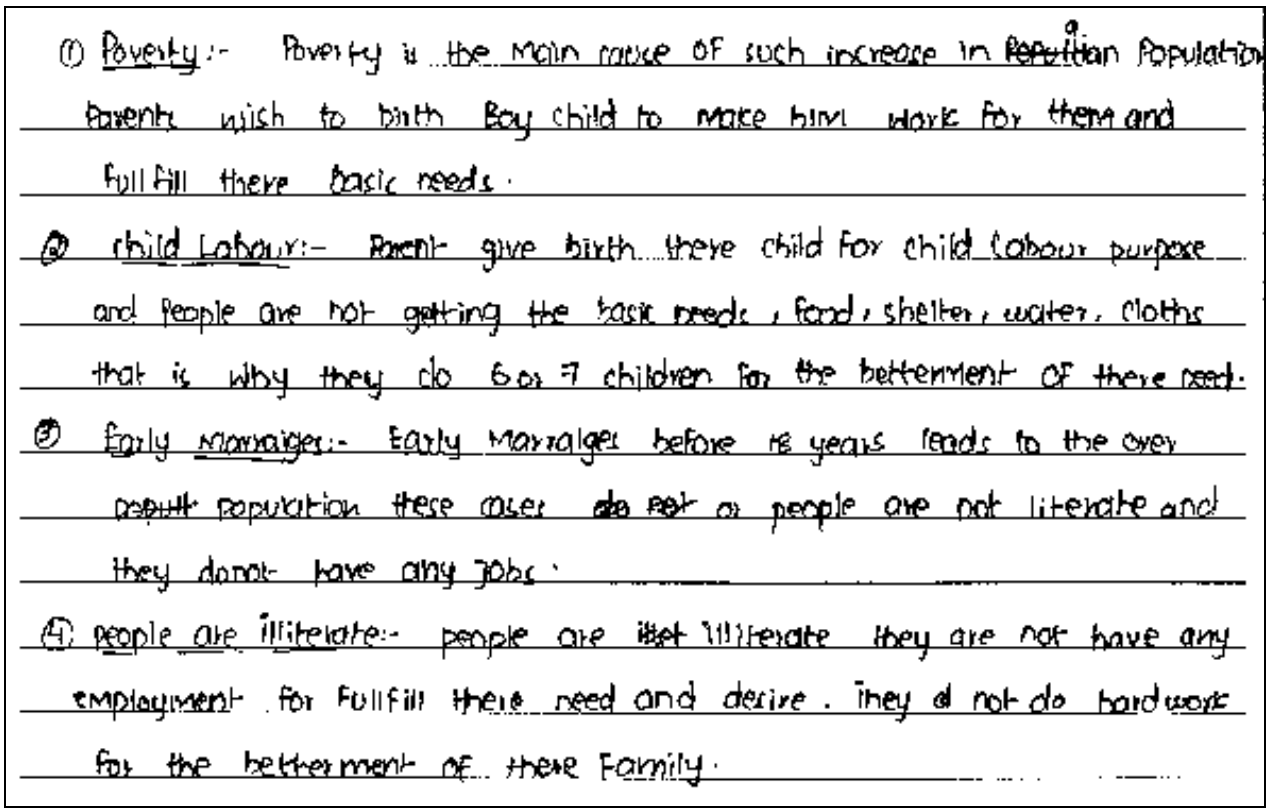

Question 13b:

The population of the world has increased exponentially during 1920 to 2018. The increase in world population is three times greater than during the entire previous history of humanity. This increase in population is from 1.5 to 6.1 billion in just 100 years.

With reference to the given statement, discuss any THREE causes of such an increase in population globally.

In *better responses,* candidate mentioned the causes of increase in population globally i.e. poverty, insufficient allocation of resources and lack of awareness to population explosion etc.

Example:

① Poverty :- Poverty is the main cause of such increase in Pakistan Population Parents wish to birth Boy child to make him work for them and Fullfill there basic needs.

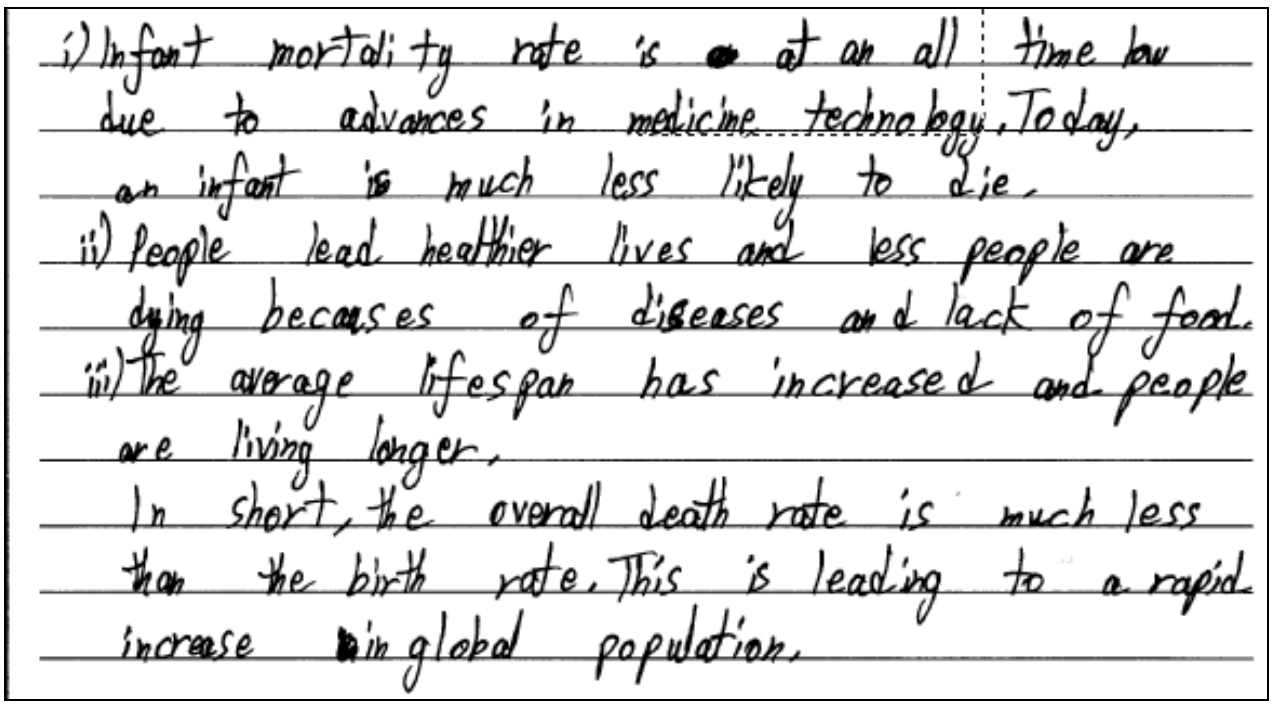

② child Labour :- Parent give birth there child for child Labour purpose and people are not getting the basic needs, food, shelter, water, Cloths that is why they do 6 or 7 children for the betterment of there need.

③ Early Marraiges :- Early Marraiges before 18 years leads to the over populated population these cases do not or people are not literate and they donot have any jobs.

④ people are illiterate :- people are illiterate they are not have any employment for Fullfill there need and desire. They do not do hard work for the betterment of there Family.

In *weaker responses*, candidates were unable to comprehend the question. Mostly, in weaker responses, the candidates wrote answers from Pakistan's perspective rather than the global perspective. Some responses adopted the general approach and wrote points in bullets with little description and were unable to elaborate the causes in a descriptive manner.

Example:

i) Infant mortality rate is at an all time low due to advances in medicine technology. Today, an infant is much less likely to die.

ii) People lead healthier lives and less people are dying becauses of diseases and lack of food.

iii) The average lifespan has increased and people are living longer.

In short, the overall death rate is much less than the birth rate. This is leading to a rapid increase in global population.
