آغا خان یونیورسٹی ایگزامینیشن بورڈ

AGA KHAN UNIVERSITY EXAMINATION BOARD

Notes from E-Marking Centre on HSSC-II Commercial Geography Annual Examinations 2024

Introduction

This document has been produced for the teachers and candidates of Higher Secondary School Certificate (HSSC) Part II Commercial Geography. It contains comments on candidates' responses to the 2024 HSSC-II Examination indicating the quality of the responses and highlighting their relative strengths and weaknesses.

E-Marking Notes

This includes overall comments on candidates' performance on every question and *some* specific examples of candidates' responses that support the mentioned comments. Please note that the descriptive comments represent an overall perception of the better and weaker responses as gathered from the e-marking session. However, the candidates' responses shared in this document represent some specific example(s) of the mentioned comments.

Teachers and candidates should be aware that examiners may ask questions that address the Student Learning Outcomes (SLOs) in a manner that requires candidates to respond by integrating knowledge, understanding and application skills they have developed during the course of study. Candidates are advised to read and comprehend each question carefully before writing the response to fulfill the demand of the question.

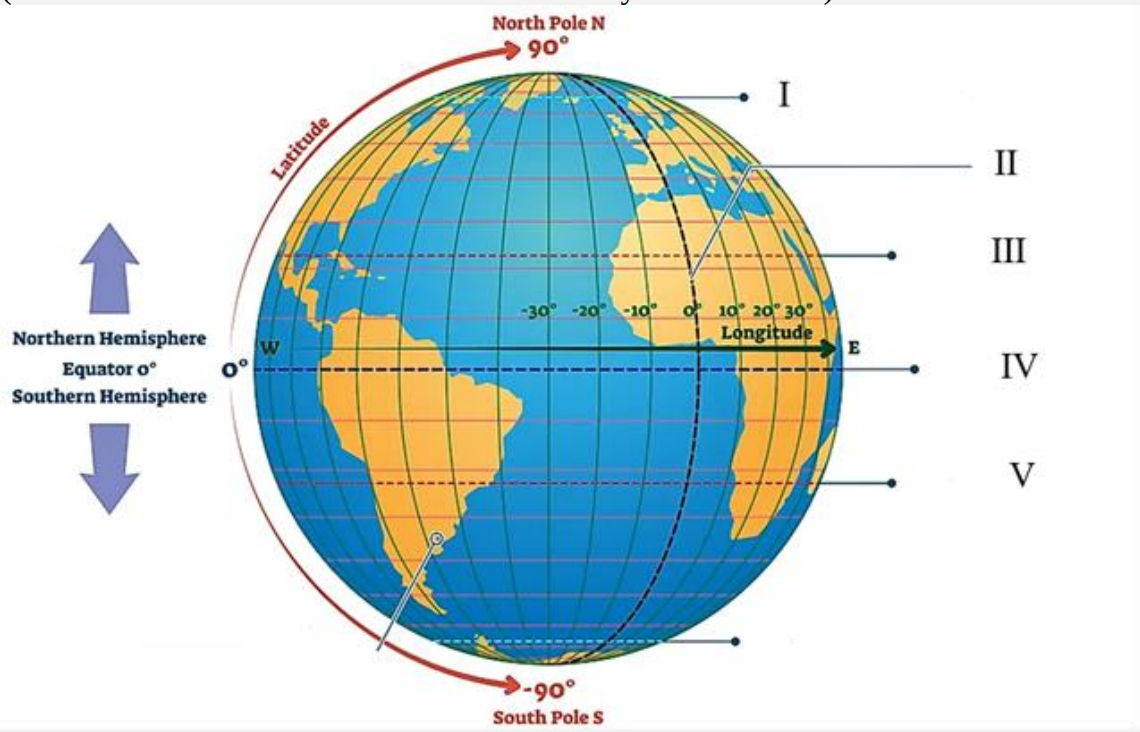

Candidates need to be aware that the marks allocated to the questions are related to the answer space provided on the examination paper as a guide to the length of the required response. A longer response will not in itself lead to higher marks. Candidates need to be familiar with the command words in the SLOs which contain terms commonly used in examination questions. However, candidates should also be aware that not all questions will start with or contain one of the command words. Words such as 'how', 'why' or 'what' may also be used.

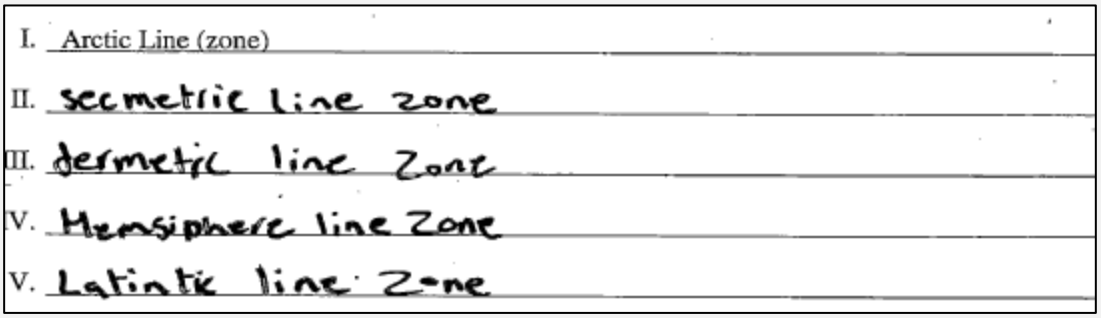

General Observations

Candidates performed very well, and overall, candidates showed a better understanding of the topics assessed. However, those who did not score well mostly failed to understand the demand of the question, often misinterpreted the command word and the stimulus. The topics related to physical geography and information regarding physical features required more attention during teaching and learning as mostly candidates faced difficulty in addressing such the questions.

Note: Candidates' responses shown in this report have not been corrected for grammar, spelling, format, or information.

DETAILED COMMENTS

Question No. 1	
Question Text	List the names of any THREE imaginary lines on the given globe. (Note: The first identification has been done for your assistance.)  I. Arctic Line (zone) II. III. IV. V.
SLO No.	1.2.5
SLO Text	Describe the key concepts regarding graticule (i.e. latitude, longitude, equator, tropics, dateline, poles and temperate)
Max Marks	3
Cognitive Level	*U
Checking Hints	Give ONE mark for each correct identification. (Three required)
Overall Performance	The performance on this question varied among the candidates. Many candidates were able to correctly identify at least some of the imaginary lines on the globe, demonstrating a good understanding of basic geographic concepts.
Description of Better Responses	*Better responses* showed that most candidates correctly identified the Equator at point IV, the Date Line and Prime Meridian at point II, and the Tropic of Cancer and Tropic of Capricorn at points III and V respectively, demonstrating a solid understanding of key imaginary lines on the globe.
Image of Better Response	I. Arctic Line (zone) II. Meridian III. Tropic of Cancer IV. Equator V.
Description of Weaker Responses	Candidates often used incorrect terms like the ‘Antarctic line’ and ‘Atlanta line’, or general descriptions such as ‘polar zone’ and ‘temperature zones’. Some confused geographic concepts by referring to “longitudinal and latitudinal lines” or providing degree values like

	23.5° without naming the corresponding lines. These errors highlighted a need for better understanding and correct terminology regarding imaginary lines on the globe.
Image of Weaker Response	

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy** Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration ** For a description of each Pedagogy, refer to Annexure A	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion: Enhanced teaching strategies focusing on visual aids and repeated reinforcement may help improve future performance in this area.		

*K = Knowledge U = Understanding A = Application and other higher-order cognitive skills

Question No. 2	
Question Text	Pakistan is considered important in the world due to its geo-strategic and geo-economical location. Give any THREE reasons to support the given statement.
SLO No.	2.1.2
SLO Text	Explain the importance of the location of Pakistan (i.e. geo-political and geo-economic);
Max Marks	3
Cognitive Level	U
Checking Hints	Give ONE mark for writing each reason (any THREE required).
Overall Performance	Overall performance on this question reflected an improved understanding of Pakistan's geo-strategic and geo-economic importance. While some candidates offered insightful and relevant reasons, others struggled with basic concepts and failed to connect them to Pakistan's context.
Description of Better Responses	*Better responses* demonstrated a clear understanding of the question. They effectively linked Pakistan's location to various strategic and economic benefits. They mentioned the following benefits: • The role of Pakistan's diverse climate in supporting agriculture. • The tourism potential of the Northern Areas contributes to foreign exchange. • Pakistan's strategic position for regional stability and as a gateway to Central Asia.

	• The significance of the China-Pakistan Economic Corridor (CPEC) in boosting trade. • The importance of Pakistan's coastal areas and warm water seaports. • The country's role in global counterterrorism efforts and as an oil refuelling centre.
Images of Better Responses	
Description of Weaker Responses	*Weaker responses* failed to connect Pakistan's geo-strategic and geo-economic importance with specific reasons. They also gave general definitions of geo-strategic and geo-economical terms rather than specific reasons relevant to Pakistan. The responses also show a lack of understanding of how Pakistan's location contributes to its global significance. Their responses were also observed to provide vague or unrelated answers that did not address the question's requirements.
Images of Weaker Responses	

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion: When teaching the importance of Pakistan's location, focus on its geo-political and geo-economical significance. Highlight its strategic position connecting Central Asia, the Middle East, and South Asia, and its impact on trade routes, regional security, and economic partnerships. Use maps to visually demonstrate its location and key trade routes.		

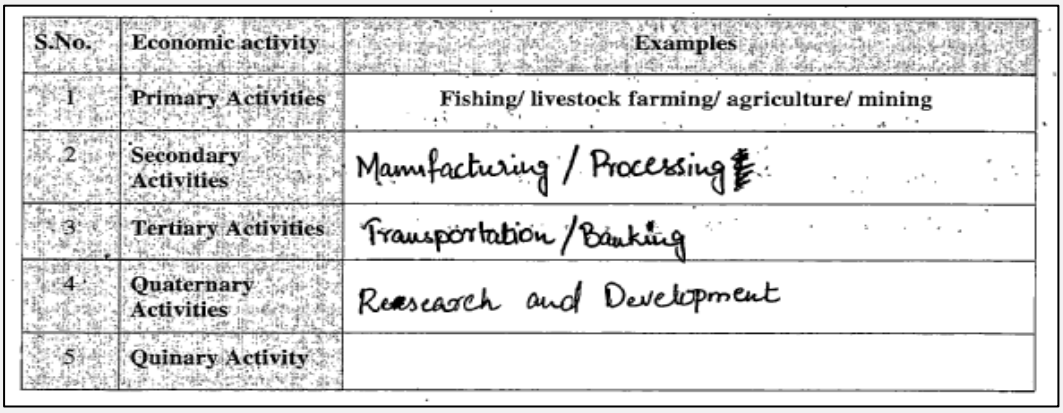

Question No. 3

Question Text

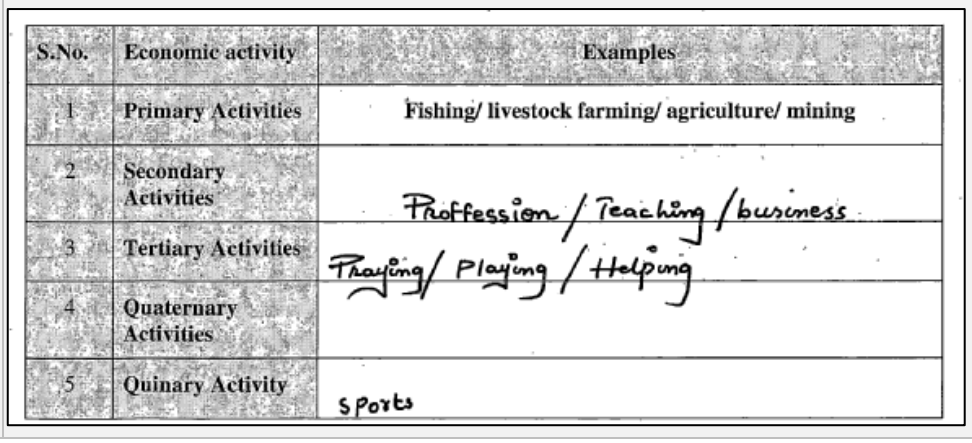

Exemplify any THREE given types of economic activities.

(Note: The first example has been written for your assistance.)

S.No.	Economic activity	Examples
1	**Primary Activities**	Fishing/ livestock farming/ agriculture/ mining
2	**Secondary Activities**	
3	**Tertiary Activities**	
4	**Quaternary Activities**	
5	**Quinary Activity**	

SLO No.	3.2.2
SLO Text	Exemplify different types of economic activities: · primary activities (raw materials) · secondary activities (manufacturing and industries) · tertiary activities (service sector)· quaternary activities (knowledge sector) · quinary sector (decision-making sector);
Max Marks	3
Cognitive Level	U
Checking Hints	Give one mark for each correct example (THREE required)
Overall Performance	The overall performance on this question showed a mixed level of understanding among the candidates. While some candidates demonstrated a clear grasp of the different types of economic activities and provided accurate examples, others struggled with the classification and provided incorrect or unrelated examples.
Description of Better Responses	Candidates who performed well on this question accurately identified and exemplified the secondary, tertiary, quaternary, and quinary activities. They correctly mentioned activities such as manufacturing in secondary, service sectors in tertiary, research and development in quaternary, and decision-making roles in quinary activities. These candidates showed a strong understanding of the distinctions between the different types of economic activities and were able to apply their knowledge effectively.
Image of Better Response	

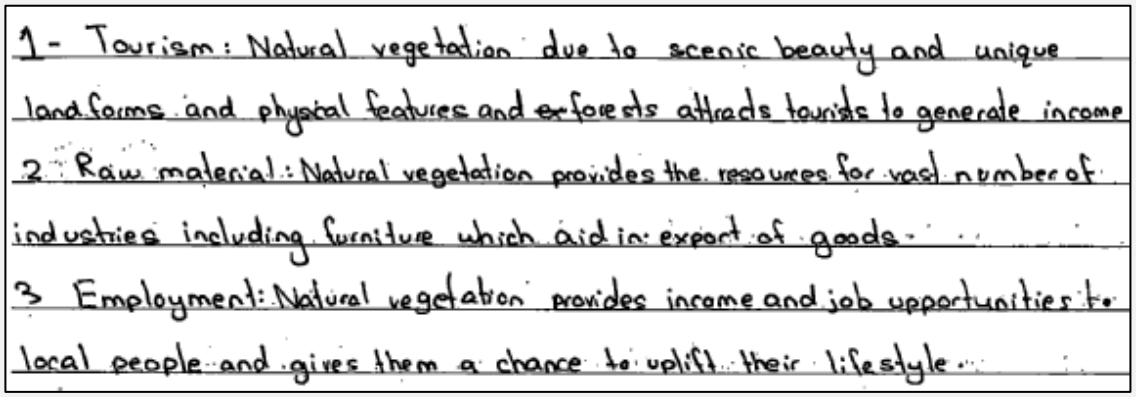

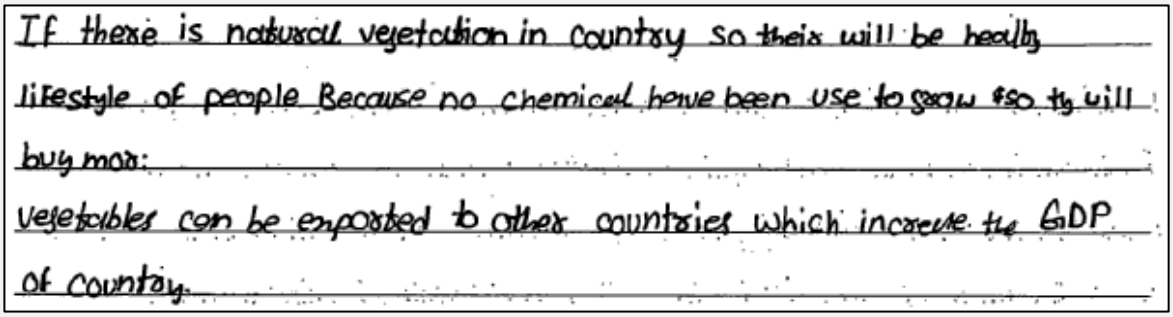

S.No.	Economic activity	Examples
1	Primary Activities	Fishing/ livestock farming/ agriculture/ mining
2	Secondary Activities	Manufacturing / Processing
3	Tertiary Activities	Transportation / Banking
4	Quaternary Activities	Research and Development
5	Quinary Activity	

Description of Weaker Responses	Candidates who struggled with this question provided examples that did not fit the categories or misunderstood the headings of the economic activities. For instance, some candidates listed items like newspapers, novels, and shoes under secondary activities or included food items and furniture under tertiary activities. Additionally, candidates mixed up the classifications, such as writing primary activities as secondary and vice versa. These *weaker responses* indicated a need for further clarification and reinforcement of the different types of economic activities and their corresponding examples.
Image of Weaker Response	

S.No.	Economic activity	Examples
1	Primary Activities	Fishing/ livestock farming/ agriculture/ mining
2	Secondary Activities	Proffession / Teaching / business
3	Tertiary Activities	Praying / Playing / Helping
4	Quaternary Activities	
5	Quinary Activity	sports

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion:		

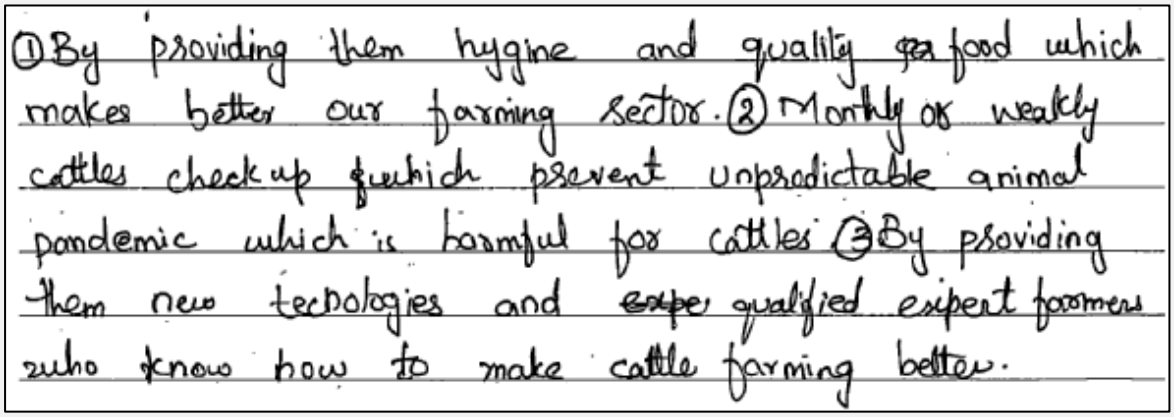

Question No. 4	
Question Text	Describe any THREE points of significance of natural vegetation for the economy of a country.
SLO No.	4.1.3
SLO Text	Discuss the commercial and economic significance of natural vegetation
Max Marks	3
Cognitive Level	U
Checking Hints	Give one mark for describing each significance (THREE required).
Overall Performance	The overall performance on this question revealed a weak understanding of the significance of natural vegetation for the economy. While many candidates showcased a strong grasp of the topic, some misinterpreted the term 'natural vegetation' as referring to agricultural products.
Description of Better Responses	*Better responses* demonstrated a comprehensive understanding of the economic significance of natural vegetation. They correctly highlighted various points, such as maintaining ecosystems and biodiversity, providing raw materials for multiple industries, supporting livelihoods, and attracting tourists. These candidates clearly understood the multifaceted role that natural vegetation plays in a country's economy, recognising its importance in direct and indirect economic contributions.
Image of Better Response	 1- Tourism: Natural vegetation due to scenic beauty and unique landforms and physical features and ~~ex~~forests attracts tourists to generate income 2: Raw material: Natural vegetation provides the resources for vast number of industries including furniture which aid in export of goods. 3 Employment: Natural vegetation provides income and job opportunities to local people and gives them a chance to uplift their lifestyle.
Description of Weaker Responses	*Weaker responses* misunderstood the term 'natural vegetation', interpreting it as agricultural product rather than wild plant life. Their responses concentrated on issues such as addressing food shortages, exporting agricultural products, lowering the prices of goods, and creating farm labor opportunities. These responses demonstrate a lack of understanding of the broader concept of natural vegetation and its ecological and economic roles beyond agriculture.
Image of Weaker Response	 If there is natural vegetation in country so their will be healthy lifestyle of people Because no chemical have been use to grow so ty will buy more: vegetables can be exported to other countries which increase the GDP of country.

Suggestions for improvement (Highlight all that apply)

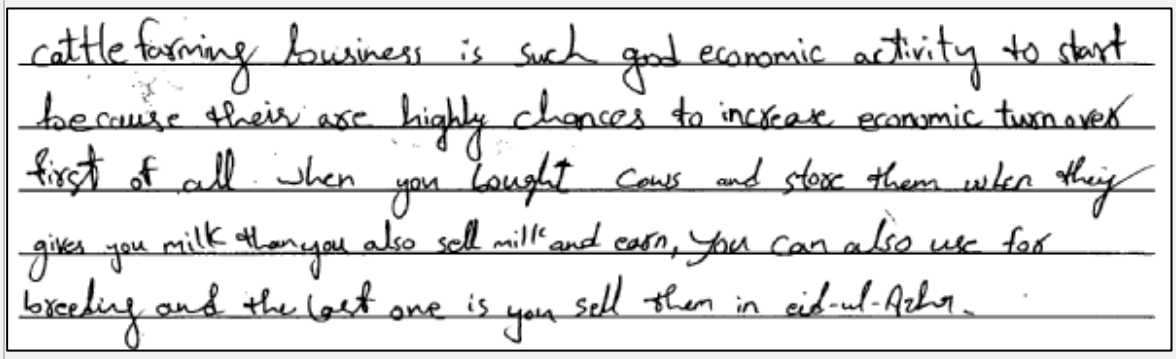

Maximising SLO Achievement	Pedagogy Used for that SLO	Assessment Strategies

• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes

Any Additional Suggestion: When teaching the commercial and economic significance of natural vegetation, start by highlighting its key roles, such as providing raw materials for industries, supporting agriculture, and contributing to ecosystem services like soil fertility and water regulation. Use specific examples, such as the economic value of timber and medicinal plants, to highlight these points. Incorporate visual aids like maps or charts to show distribution and economic impact and discuss current issues like deforestation to connect the topic to real-world implications. Engage students with case studies or interactive discussions to deepen their understanding of how natural vegetation impacts economies and commerce.

Question No. 5	
Question Text	Propose any THREE strategies to enhance efficiency and increase economic turnover in the cattle-farming sector.
SLO No.	6.4.2
SLO Text	Analyse the reasons for backwardness in the agricultural sector of Pakistan;
Max Marks	3
Cognitive Level	U
Checking Hints	Give one mark for each correct suggestion (THREE required).
Overall Performance	The overall response to this question was mixed. Many candidates showed a strong understanding of the sector's needs and proposed relevant and practical strategies. However, some responses lacked relevance and did not address the core aspects of improving efficiency and economic performance in cattle farming.
Description of Better Responses	*Better responses* proposed a range of effective strategies for enhancing the cattle-farming sector. Common suggestions included increasing government support, improving access to credit facilities, and enhancing animal nutrition. They also recommended improving animal genetics, marketing practices, and training for farmers. Other valuable points included investing in research and development, providing adequate grazing grounds, improving hygienic conditions, adopting new technologies, ensuring proper vaccination, and offering better shelter for cattle.
Image of Better Response	

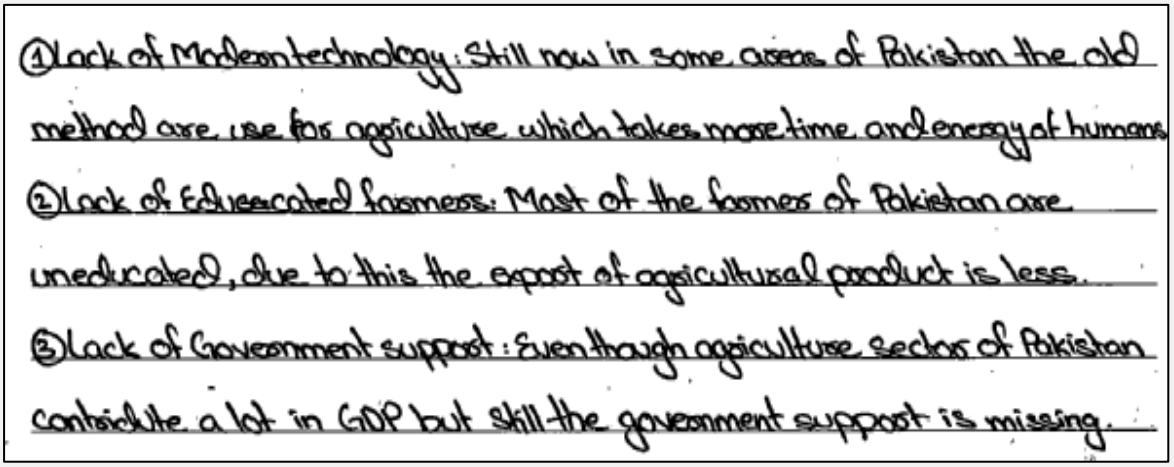

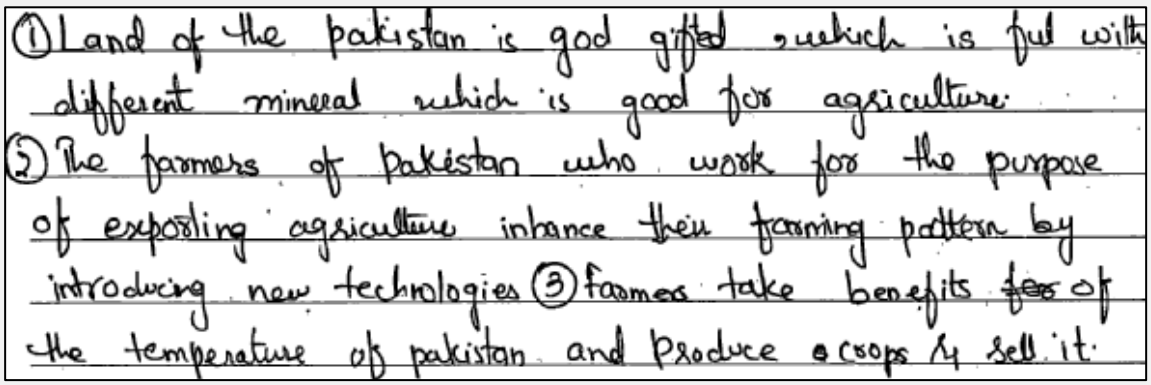

①By providing them hygine and quality ~~ga~~ food which makes better our farming sector. ② Monthly or weakly cattles check up ~~fu~~which ~~pr~~event unpredictable animal pandemic which is harmful for cattles ③By providing them new tecnologies and ~~expe~~ qualfied exipert farmers who know how to make cattle farming better.

Description of Weaker Responses	*Weaker responses* included suggestions that were either irrelevant or impractical. For example, some candidates focused on exporting cattle to specific countries or using milk and skins in ways not directly related to improving the sector's efficiency. Others mentioned issues like corruption or suggestions that were unrelated to cattle-farming, such as using high-quality seeds and fertilisers or reducing water use. These responses did not adequately address the strategies needed to enhance efficiency and economic performance in the cattle-farming sector.
Image of Weaker Response	 cattle farming business is such good economic activity to start because their are highly chances to increase economic turnover first of all when you bought cows and store them when they gives you milk then you also sell milk and earn, you can also use for breeding and the last one is you sell them in eid-ul-Azha.

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion:		

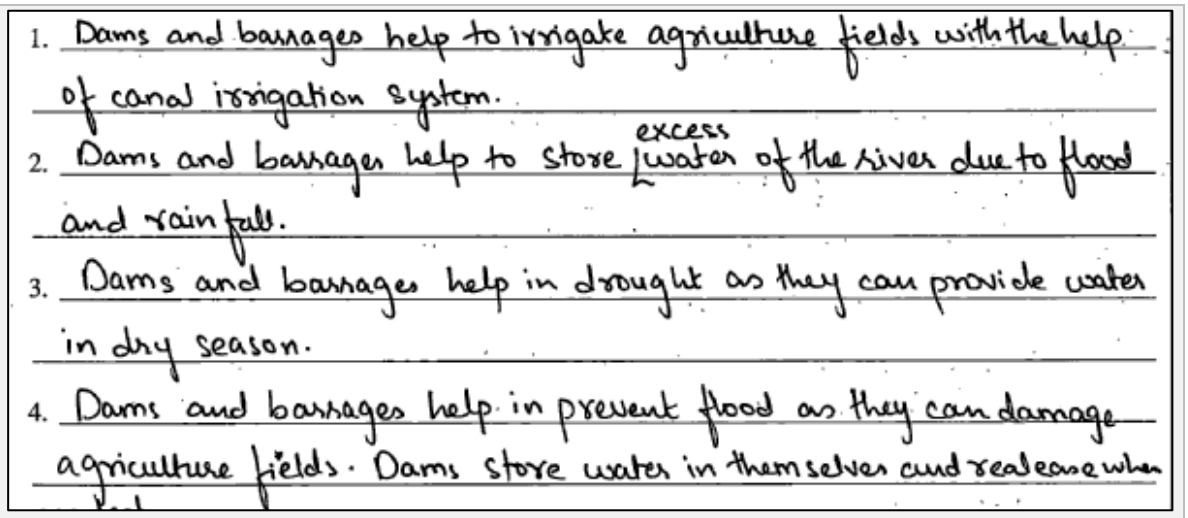

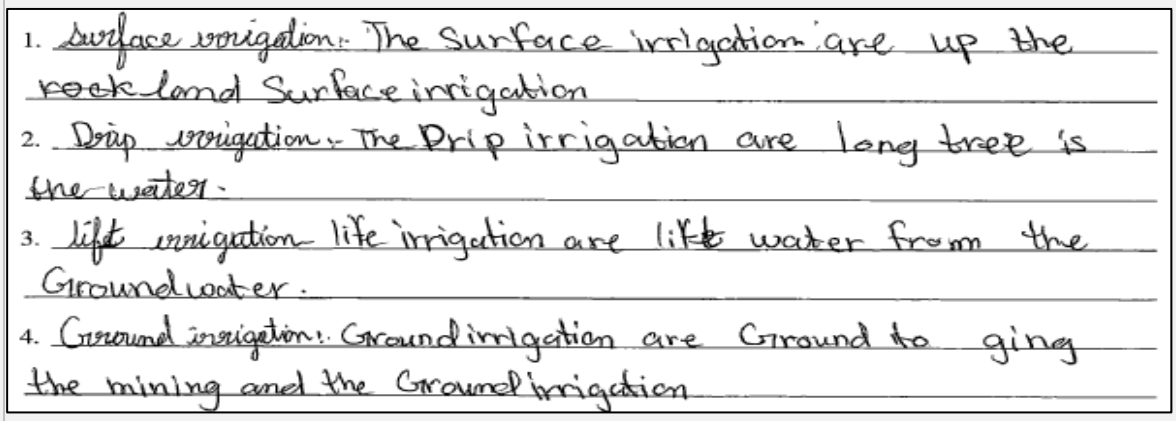

Question No. 6	
Question Text	Despite possessing fertile land, ample freshwater, and the world's largest canal network, Pakistan, classified as an agrarian economy, has been unable to fully leverage these resources. Over the past 75 years, the improvement in exports, primarily based on agricultural products, has been notably limited. With reference to the given statement, analyse THREE reasons for backwardness in the agricultural sector of Pakistan.
SLO No.	6.4.2
SLO Text	Analyse the reasons for backwardness in the agricultural sector of Pakistan;
Max Marks	3
Cognitive Level	U
Checking Hints	Give one mark for highlighting each point (THREE required)

Overall Performance	The overall performance on this question showed a good level of understanding among the candidates. Many candidates provided a comprehensive analysis by discussing several critical issues affecting the sector. However, several responses failed to address the specific reasons for backwardness by including irrelevant details.
Description of Better Responses	*Better responses* effectively addressed the reasons behind the stagnation in Pakistan's agricultural sector. Candidates highlighted several key issues mentioned below: • Outdated methods and lack of modern technologies hindered progress. • Lack of education and shortage of skilled labour contributed to inefficiencies. • Financial issues and lack of government interest impacted investment in the sector. • Insufficient infrastructure and an inefficient irrigation system further exacerbated the problem. • Quality of seeds, scarcity of water, and natural disasters such as floods also played significant roles. • The migration from rural to urban areas and urbanisation increased pressure on the sector. • Lack of HV (high-yield variety) seeds and expensive machinery also limited agricultural advancement.
Image of Better Response	 ①Lack of Modern technology: Still now in some areas of Pakistan the old method are use for agriculture which takes more time and energy of humans ②Lack of Edueecated farmers: Most of the farmers of Pakistan are uneducated, due to this the export of agricultural product is less. ③Lack of Government support: Even though agriculture sector of Pakistan contribute a lot in GDP but still the government support is missing.
Description of Weaker Responses	The *weaker responses* focused on names of agricultural products rather than analysing reasons for backwardness. Many candidates ignored the command word 'analyse', leading to responses that lacked depth. There was a noticeable repetition of sentences, which did not add value to their analysis. Instead of analysing reasons for backwardness, some candidates discussed suggestions for advancement, missing the core of the question.
Image of Weaker Response	 ①Land of the pakistan is god gifted ,which is fut with different mineral which is good for agriculture. ②The farmers of pakistan who work for the purpose of exporting agriculture inhance their farming pattern by introducing new technologies ③ farmers take benefits for of the temperature of pakistan and produce crops & sell it.

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion:		

Question No. 7	
Question Text	Pakistan's irrigation system is one of the most delegate and efficient system of the world, which enables the free flow of waters to the vast area of fertile lands. With reference to the given statement, what role do dams and barrages play in the irrigation system of Pakistan. Mention FOUR points.
SLO No.	7.3.4
SLO Text	Discuss the role of barrages and dams in the canal irrigation system of Pakistan;
Max Marks	4
Cognitive Level	U
Checking Hints	Give one mark for mentioning each point of significance in the irrigation of Pakistan (four required)
Overall Performance	The performance on this question varied. While some candidates provided comprehensive answers that demonstrated a clear understanding of the subject, others struggled with focus and relevance of the dams and barrages in the irrigation system of Pakistan.
Description of Better Responses	*Better responses* highlighted the key roles of dams and barrages in the irrigation system of Pakistan. They effectively covered several important aspects, such as: • Providing water during droughts and dry seasons, ensuring a reliable water supply. • Addressing the lack of rainfall by storing and regulating water flow. • Diverting water flow to different areas and canals to optimise water distribution. • Preventing water wastage and protecting against water logging and salinity. • Offering benefits like flood prevention and supporting electric generation. These responses showed a clear grasp of how dams and barrages contribute to the efficiency and effectiveness of Pakistan's irrigation system.

Image of Better Response	 1. Dams and barrages help to irrigate agriculture fields with the help of canal irrigation system. 2. Dams and barrages help to store excess water of the river due to flood and rainfall. 3. Dams and barrages help in drought as they can provide water in dry season. 4. Dams and barrages help in prevent flood as they can damage agriculture fields. Dams store water in themselves and realease when
Description of Weaker Responses	*Weaker responses failed to meet the requirement of the question. These responses provided the following points which were incorrect:* Dams might remove water shortages or details about the types of irrigation systems, which were not required. Interchanging the roles of dams and barrages with their differences or names, rather than explaining their specific functions in the irrigation system. Mentioning domestic water use, marine life support, or local water shortages, which were not directly related to the role of dams and barrages in the irrigation system.
Image of Weaker Response	 1. Surface irrigation:- The Surface irrigation are up the rock land Surface irrigation 2. Drip irrigation:- The Drip irrigation are long tree is the water. 3. lift irrigation life irrigation are lift water from the Groundwater. 4. Ground irrigation:- Ground irrigation are Ground to ging the mining and the Ground irrigation

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Pedagogy Used for that SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion:		

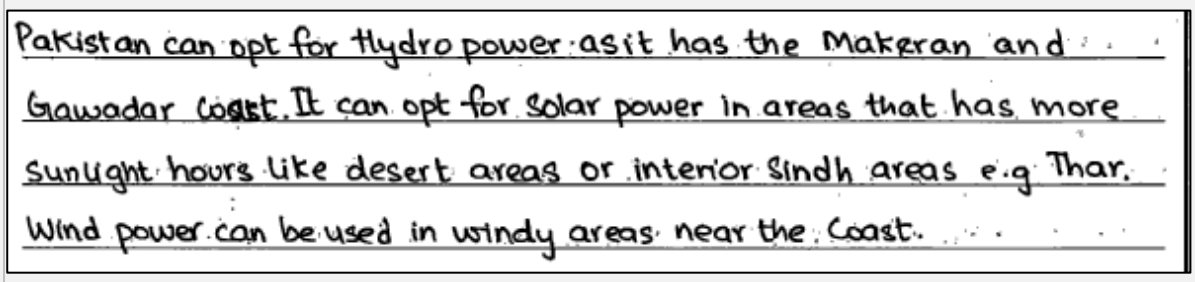

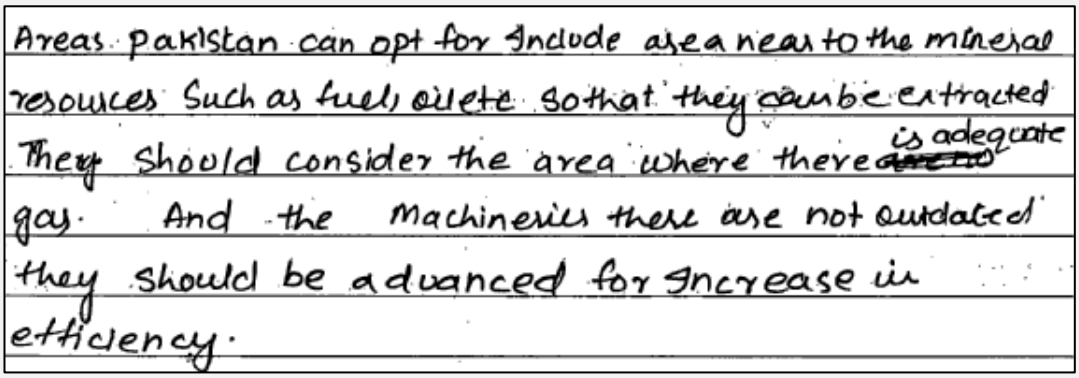

Question No. 8	
Question Text	Pakistan's energy sector remains a key hindrance to economic growth. Despite increased power generation since 2013, challenges such as expensive fuel sources, dependence on imported energy, chronic natural gas shortages, substantial debt in the power sector, and outdated transmission and distribution systems have impeded sectoral growth and modernisation. In the light of the given problem, which THREE major potential areas of renewable power resources Pakistan can opt for?
SLO No.	8.4.4
SLO Text	Identify the potential areas of renewable power resources in Pakistan
Max Marks	3
Cognitive Level	U
Checking Hints	Give ONE mark for each identification of power resources. (THREE required)
Overall Performance	The overall performance on this question showed a good level of understanding among the candidates. Candidates who provided *better responses* were able to identify specific renewable energy sources and their suitable locations within the country. In contrast, *weaker responses* showed a lack of understanding of renewable energy concepts and included irrelevant or incorrect information.
Description of Better Responses	*Better responses* effectively identified and explained three major areas for renewable power resources in Pakistan. They mentioned the potential of solar power, particularly in desert areas; wind power, especially in the Gharo-Keti Bandar wind corridor in Sindh and coastal areas of Balochistan; and hydropower, including utilisation of existing dams and fast-flowing rivers. Additionally, some responses included other renewable sources like biogas and tidal power, demonstrating a well-rounded knowledge of renewable energy options.
Images of Better Responses	
Description of Weaker Responses	*Weaker responses* lacked a clear understanding of renewable power resources and included irrelevant information. Some candidates included non-renewable sources like coal or thermal energy, or discussed issues unrelated to the question, such as outdated transmission systems or the use of electricity and gas stoves. There was also confusion about suitable areas for renewable resources, with some responses suggesting areas with no habitation or focusing on incorrect types of energy.

Image of Weaker Response	 Areas pakistan can opt for include area near to the mineral resources such as fuel oil etc so that they can be extracted They should consider the area where there is adequate gas. And the machineries there are not outdated they should be advanced for increase in efficiency.

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion: When teaching about potential areas for renewable power resources in Pakistan, start by highlighting the key types of renewable energy, such as solar, wind, hydro, and biomass. Use maps and data to show regions with high potential for each resource, like the sunny areas in Balochistan for solar power or the windy coastal areas of Sindh for wind energy. Engage students with case studies or examples of successful projects in Pakistan. Encourage critical analysis of geographic and climatic factors affecting resource potential and discuss how these resources could address the country's energy needs.		

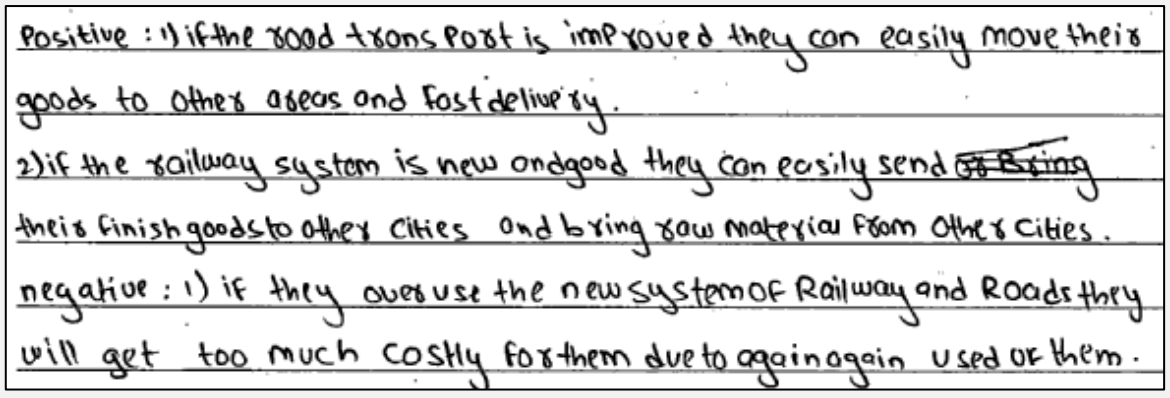

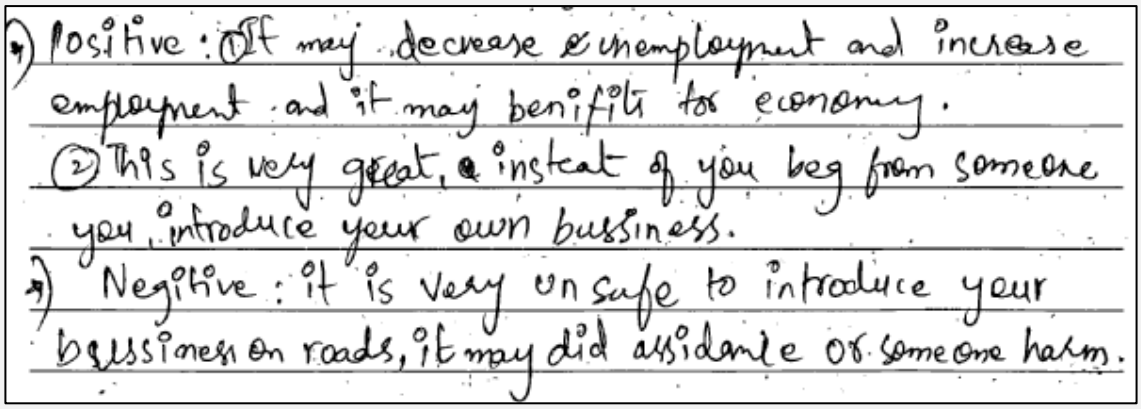

Question No. 9	
Question Text	Imagine a small town with several local businesses producing goods like furniture and clothing. Analyse any TWO positive and ONE negative impact of improved roads or a new railway system on these businesses and the town's overall economic growth.
SLO No.	10.1.3
SLO Text	Analyse the economic and commercial importance of transportation sector in an economy;
Max Marks	3
Cognitive Level	U
Checking Hints	Give ONE mark for complete analysis of negative impact (ONE required). one marks only be awarded if analysis is not done.
Overall Performance	This question proved to be challenging for the candidates. The responses to the question about the impact of improved roads or a new railway system on local businesses and the town's economic growth showed a range of understanding. While some candidates identified both positive and negative impacts, others were less comprehensive and did not fully address all the aspects of the question.
Description of Better Responses	*Better responses* offered a thorough analysis of the impacts. They noted that improved infrastructure would lead to increased tax revenue and economic growth due to easier transportation of goods. They mentioned that businesses would benefit from reduced transportation costs and better access to raw materials, which could enhance living standards and attract tourism. However, they also recognised negative impacts such as pollution, potential health issues, and disruptions during the installation phase. They discussed the risk of increased accidents and potential declines in local business as products might be sourced from outside the town. Overall, these responses effectively balanced the positive and negative aspects.
Images of Better Responses	 Positive : 1) if the road transport is improved they can easily move their goods to other areas and fast delivery. 2) if the railway system is new and good they can easily send ~~to bring~~ their finish goods to other cities and bring raw material from other cities. negative : 1) if they overuse the new system of Railway and Roads they will get too much costly for them due to again again used of them.
Description of Weaker Responses	*Weaker responses* failed to fully address the negative impacts of improved roads or a new railway system. While they might have mentioned some positive points, such as increased revenue and economic growth, they did not adequately highlight the potential downsides. These responses lacked detailed analysis and did not construct sentences effectively. Some candidates focused on economic growth without considering the broader implications, such as increased pollution or disruptions during construction. They also did not pay enough attention to the command words, particularly analyse', which led to incomplete or superficial answers.

Image of Weaker Response	

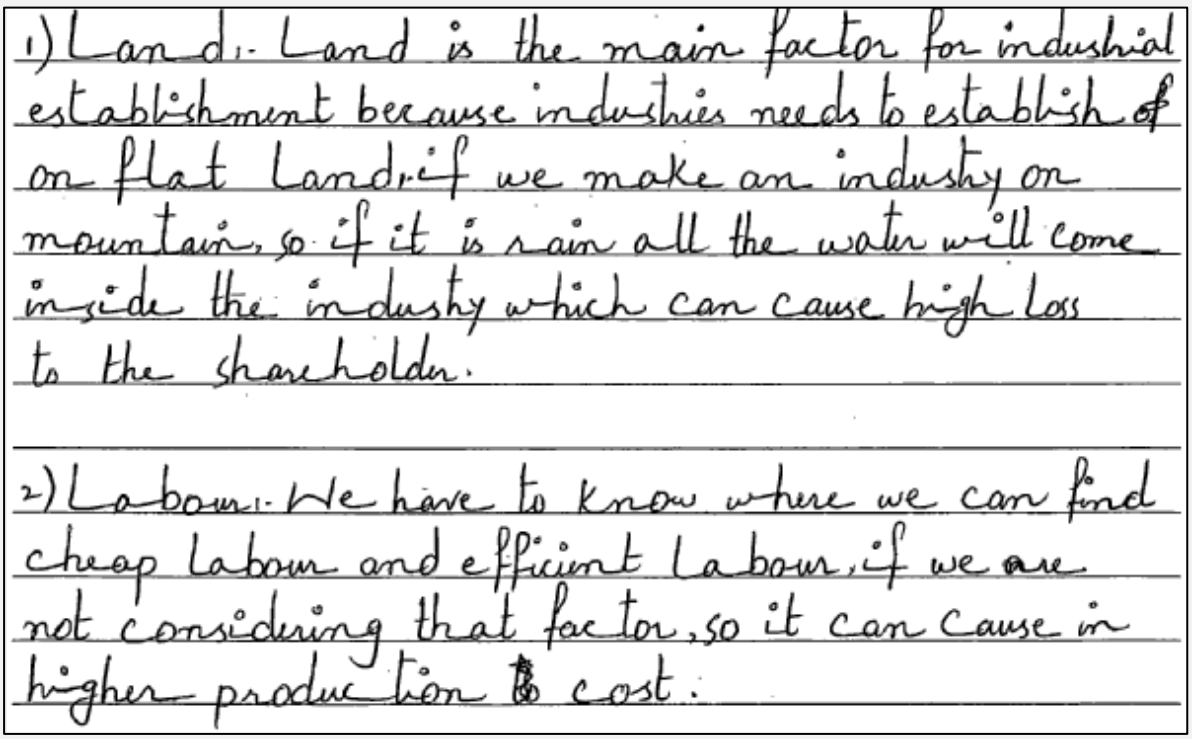

a) Positive: ① It may decrease unemployment and increase employment and it may benifits for economy.
② This is very great, instead of you beg from someone you introduce your own bussiness.
b) Negitive: it is very unsafe to introduce your bussiness on roads, it may did assidanle or someone harm.

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	**Preferred Pedagogy Used for this SLO**	**Assessment Strategies**
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion: When teaching the economic and commercial importance of the transportation sector, start by highlighting its role in facilitating trade, boosting economic growth, and connecting markets. Use real-world examples to show how efficient transportation lowers costs, increases productivity, and supports job creation. Incorporate case studies of key transportation projects and their impact on local and national economies. Engage students with interactive activities, such as analysing transportation infrastructure's effects on different industries. Encourage critical thinking by discussing potential challenges and innovations in the sector and relate these to current economic trends.		

Extended Response Questions (ERQs)

Extended response questions offered a choice between parts 'a' and 'b'

Question No. 10a	
Question Text	Imagine a small town with several local businesses producing goods like furniture and clothing. Analyse any TWO positive and ONE negative impact of improved roads or a new railway system on these businesses and the town's overall economic growth.
SLO No.	9.1.4
SLO Text	Analyse the factors for establishing or localisation of different types of industries (i.e. geographical, economical and sociopolitical factors) for iron and steel industry, textile industry, sugar industry, cement and fertiliser;
Max Marks	7
Cognitive Level	U
Checking Hints	Give one mark for mentioning each factor (any FOUR required). Give an additional mark if each factor is well explained (any THREE required)
Overall Performance	This was choice-based question and majority of the candidates attempted this question. The overall performance on this question showed a good level of understanding among the candidates about the impact of improved roads or a new railway system on these businesses and commercial activities.
Description of Better Responses	*Better responses* demonstrated a strong understanding of the question and addressed it comprehensively. Candidates effectively analysed two positive impacts and one negative impact by considering various factors such as infrastructure improvements, market access, cost, capital, regulatory changes, environmental considerations, resource availability, competitive landscape, sustainability, and supply factors like labour and raw materials. Their answers included detailed explanations, showing a thorough grasp of how these factors influence local businesses and the town's economic development.
Images of Better Responses	 1) Land :- Land is the main factor for industrial establishment because industries needs to establish on flat land. if we make an industry on mountain, so if it is rain all the water will come inside the industry which can cause high loss to the shareholder. 2) Labour :- We have to know where we can find cheap labour and efficint labour, if we are not considering that factor, so it can cause in higher production & cost.

	3) Reach to Market:- We have to make industries on those where we can delivered our product easily to the markets. If we make industries far away from the market so it can cause in higher cost of production and it can also reduce demand for the products if delivery is not reaching on the time. 4) Mode of technology:- We have to adopt modern mode of technology because if we are using old machines and form of technology it can reduce our total number of production because it is time taking and quality of product also matter because advance technology help in producing good quality of products than old technology.
Description of Weaker Responses	*Weaker responses* only listed points without providing sufficient explanations. Some candidates mentioned relevant factors but failed to elaborate on how these factors impacted the businesses or the town's economy. Consequently, these responses were less detailed and did not demonstrate a deep understanding of the question.
Image of Weaker Response	Azeem is an entrepreneur, and he is planing to establish ready-made garments factory, This scenerio comes in Textile industry. Textile industry is one of the higher ranked industry in Pakistan, it gives good number of GDP to the country. While selecting a location of establishing a industry, he must need to see that the availibility of Water is there in a particular area, because Water is very great essential in textile. Dyeing, printing etc all are been done by the help of water. Thorn check the electricity in the particular area. Textile industry demands for heavy use of machinery which can only be worked by

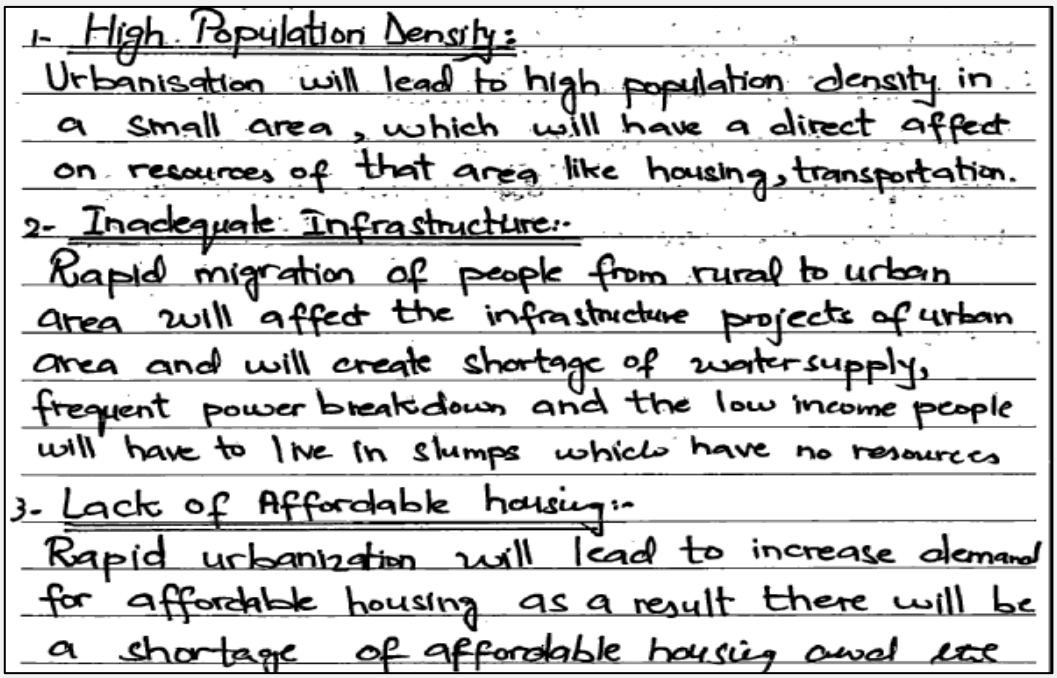

~~electrcu~~ electricity. ~~Ma~~ Thean majority textile industries are at the site areas because due to machines there is noice pollution etc.

The economical benefits of Textile industry are that they provide employment ~~of~~ ~~to~~ to large number of people, By which the standard of living increases. Due to Textile industry there is growth in economic expansion because of increase in GDP. The garment products are exported to other countries by which the countries economic condition increases.

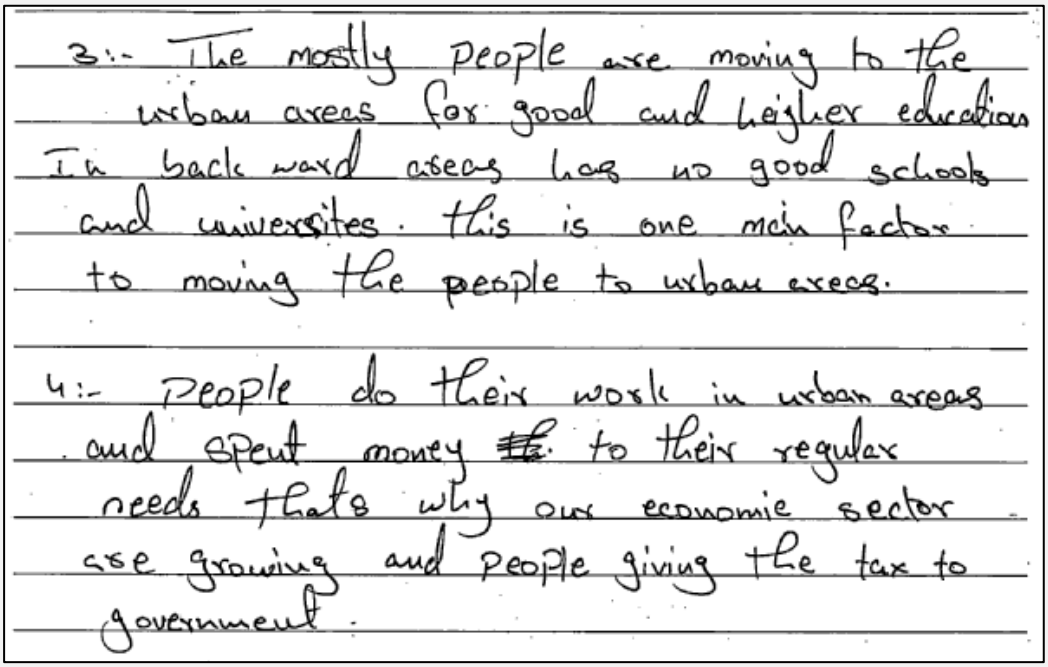

Azeem should try all these ways and techineges to establish a garment industry. I have also told him benefits of having a garment industry in this ~~ecomon~~ economy.

Suggestions for improvement (Highlight all that apply)

• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion:		

Question No. 10b	
Question Text	Pakistan has the highest rate of urbanisation in South Asia. According to the 2017 Population Census, 36.4% of the population lives in urban areas. The UN Population Division estimates that, by 2025, nearly half the country's population will be living in cities. In 2023, Urban population is 37.73% of total population and the rate of urbanisation is 3% annually. (Source: https://www.undp.org/pakistan/urbanisation-pakistan) The given information reflects that Pakistan's rate of urbanisation is rising rapidly. Discuss any FIVE effects it will have on the economy.
SLO No.	11.2.6
SLO Text	Evaluate the problems that accompany migration and urbanisation;
Max Marks	7
Cognitive Level	U
Checking Hints	Give one mark mentioning the effects of rising urbanisation (FOUR required). Give one mark additional if the points are well explained and linked to the given information (THREE required).
Overall Performance	Few candidates attempted this question, The responses to the question on the effects of rapid urbanisation in Pakistan were varied. Many candidates displayed a reasonable understanding of the topic, addressing both positive and negative impacts. However, there were inconsistencies in how effectively candidates discussed the impacts and in their focus on direct versus indirect effects of urbanisation.
Description of Better Responses	*Better responses* showed a balanced analysis of both the positive and negative effects of urbanisation. Candidates highlighted several positive impacts such as the expansion of commercial activities, increased production, consumption, and distribution, as well as improvements in living standards. They also discussed how urbanisation could reduce illiteracy and provide a labour force for secondary and tertiary industries. On the negative side, they noted issues such as the burden on resources and infrastructure, increased unemployment, unplanned city growth, higher crime rates, reduced job opportunities, and heightened competition in business, all of which place additional pressure on the government.
Images of Better Responses	 1- High Population Density: Urbanisation will lead to high population density in a small area, which will have a direct affect on resources of that area like housing, transportation. 2- Inadequate Infrastructure:- Rapid migration of people from rural to urban area will affect the infrastructure projects of urban area and will create shortage of water supply, frequent power breakdown and the low income people will have to live in slumps which have no resources 3- Lack of Affordable housing:- Rapid urbanization will lead to increase demand for affordable housing as a result there will be a shortage of affordable housing and etc

	people have to live in slums. 4- Poverty and Reduction in Economic Development~~Rapid urbanization~~ As there are limited job opportunities because of disparity in skills a majority of people remain unemployment which lead to poverty and cause decrease in the standard of living as a whole due to which urbanisation creates a negative impact on Economic develepmat of a country. 5. Increase in Crime Rate:- As majority of people remain unemployed due to fewer job, it lead to increase in crime rate in the country as they are unable to earn the basic necessities of life. Therefore, increase in urbanisation affects a country's resources ~~causing~~ causes unemployment and reduction in the quality of life of the people.
Description of Weaker Responses	*Weaker responses* struggled with addressing the question effectively. Some candidates incorrectly noted that Pakistan's rate of urbanisation was decreasing, which is contrary to the data provided. Several candidates only listed effects without discussing them in depth. Others confused the causes of urbanisation with its effects. Responses also included indirect effects like more work opportunities in urban areas or increased educational and medical facilities, rather than focusing on direct economic impacts. This approach led to a lack of depth and clarity in their analysis.
Image of Weaker Response	1:- First effect is the Peoples of villages do their jobs in urban areas it is the major fact thats people moving to the urban areas. People didiut go back in their homes at late night so thats why the takes his familly and shift to the urban areas. 2:- In urban areas are the very good opportunity for Peoples to do their work and in back ward areas have limited opportunities for people to ~~for~~ earn money.

Suggestions for improvement (Highlight all that apply)

Maximising SLO Achievement	Preferred Pedagogy Used for this SLO	Assessment Strategies
• Identify the expectation of command words (use Command Word Guide) • Ensure the content is taught at the relevant cognitive level • Identify necessary content required (skills + concepts) • Review past paper questions on the concept • Utilise the resource guide for additional materials	• Story Board • Cause and Effect • Fish and Bone • Concept Mapping • Audio Visual Resources • Think, Pair and Share • Questioning Technique (Socratic approach) • Practical Demonstration	• Past paper questions • Discussion on E-Marking Notes
Any Additional Suggestion: When teaching about the problems associated with migration and urbanisation, start by defining key terms and outlining common issues such as overcrowding, strain on infrastructure, and social inequality. Use case studies from various cities to illustrate these problems in real-life contexts. Incorporate interactive activities, like group discussions or role-playing, to explore different perspectives. Employ visual aids such as charts or maps to highlight data on migration and urban growth. Encourage students to critically assess potential solutions and the effectiveness of urban planning strategies to address these challenges.		

Annexure A: Pedagogies Used for Teaching the SLOs

Pedagogy: Storyboard
Description: A visual pedagogy that uses a series of illustrated panels to present a narrative, encouraging creativity and critical thinking. It helps learners organise ideas, sequence events, and comprehend complex concepts through storytelling.
Example: In a Literature class, students are tasked with creating storyboards to visually retell a novel. They draw key scenes, write captions, and present their stories to the class, enhancing their reading comprehension and fostering their imagination.

Pedagogy: Cause and Effect
Description: This pedagogy explores the relationships between actions and consequences. By analysing cause-and-effect relationships, learners develop a deeper understanding of how events are interconnected and how one action can lead to various outcomes.
Example: In a History class, students study the causes and effects of the Industrial Revolution. They research and discuss how technological advancements in manufacturing led to significant societal changes, such as urbanisation and labour reform movements.

Pedagogy: Fish and Bone
Description: A method that breaks down complex topics into main ideas (the fish) and supporting details (the bones). This visual approach enhances comprehension by highlighting essential concepts and their relevant explanations.
Example: During a Biology class on human anatomy, the teacher uses the fish and bone technique to teach about the human skeletal system. Teacher presents the main components of the human skeleton (fish) and elaborates on each bone's structure and function (bones).

Pedagogy: Concept Mapping
Description: An effective way to visually represent relationships between ideas. Learners create diagrams connecting key concepts, aiding in understanding the overall structure of a subject and fostering retention.
Example: In a Psychology assignment, students use concept mapping to explore the various theories of personality. They interlink different theories, such as Freud's psychoanalysis, Jung's analytical psychology, and Bandura's social-cognitive theory, to see how they relate to each other.

Pedagogy: Audio Visual Resources
Description: Incorporating multimedia elements like videos, images, and audio into lessons. This approach caters to different learning styles, making educational content more engaging and memorable.
Example: In a General Science class, the teacher uses a documentary-style video to teach about the solar system. The video includes stunning visual animations of the planets, interviews with astronomers, and background music, enhancing students' interest and understanding of space.

Pedagogy: Think, Pair, and Share
Description: A collaborative learning technique where students ponder a question or problem individually, then discuss their thoughts in pairs or small groups before sharing with the entire class. It fosters active participation, communication skills, and diverse perspectives.
Example: In a Literature in English class, the teacher poses a thought-provoking question about a novel's moral dilemma. Students first reflect individually, then pair up to exchange their opinions, and finally participate in a lively class discussion to explore different viewpoints.

Pedagogy: Questioning Technique (Socratic Approach)
Description: Based on Socratic dialogue, this method stimulates critical thinking by posing thought-provoking questions. It encourages learners to explore ideas, justify their reasoning, and discover knowledge through a process of inquiry.
Example: In an Ethics class, the instructor uses the Socratic approach to lead a discussion on the meaning of justice. By asking a series of probing questions, the students engage in a deeper exploration of ethical principles and societal values.

Pedagogy: Practical Demonstration
Description: A hands-on approach where learners observe real-life applications of theories or skills. Practical demonstrations enhance comprehension, skill acquisition, and problem-solving abilities by bridging theoretical concepts with real-world scenarios.
Example: In a Food and Nutrition class, the instructor demonstrates the proper technique for filleting a fish. Students observe and then practice the skill themselves, learning the practical application of knife skills and culinary precision.

(**Note:** The examples provided in this annexure serve as illustrations of various pedagogies. It is important to understand that these pedagogies are versatile and can be applied across subjects in numerous ways. Feel free to adapt and explore these techniques creatively to enhance learning outcomes in your specific context.)

Acknowledgements

The Aga Khan University Examination Board (AKU-EB) acknowledges with gratitude the invaluable contributions of all the dedicated individuals who have played a pivotal role in the development of the Commercial Geography HSSC-II E-Marking Notes.

We extend our sincere appreciation to Mr Muhammad Affan Siddiquie, Specialist in Commerce at AKU-EB, for taking the subject lead during the entire process of e-marking.

We particularly thank to Ms Azmat Zehra, Habib High School, and Ms Mahajabeen, IISAR Foundation School, Karachi, for evaluating each question's performances, delineating strengths and weaknesses in candidates' responses, and highlighting instructional approaches along with recommendations for better performance.

Additionally, we express our gratitude to the esteemed team of reviewers for their constructive feedback on overall performance, better and weaker responses, and validating teaching pedagogies along with suggestions for improvement.

These contributors include:

- Sania Iqbal Siddiqui, Specialist, Curriculum and Examination Development, AKU-EB
- Munira Muhammad, Lead Specialist, Assessment, AKU-EB
- Zain Muluk, Manager, Examination Development, AKU-EB
- Raabia Hirani, Manager, Curriculum Development, AKU-EB
- Dr Naveed Yousuf, CEO, AKU-EB
